

## Datasheet for ABIN3130276 LGALS8 Protein (AA 1-316) (Strep Tag)

Overview Quantity: 1 mg LGALS8 Target: Protein Characteristics: AA 1-316 Mouse Origin: Source: Tobacco (Nicotiana tabacum) Protein Type: Recombinant Purification tag / Conjugate: This LGALS8 protein is labelled with Strep Tag. Application: Western Blotting (WB), SDS-PAGE (SDS), ELISA Product Details Sequence: MLSLNNLQNI IYNPIIPYVG TITEQLKPGS LIVIRGHVPK DSERFQVDFQ LGNSLKPRAD VAFHFNPRFK RSSCIVCNTL TQEKWGWEEI TYDMPFRKEK SFEIVFMVLK NKFQVAVNGR HVLLYAHRIS PEQIDTVGIY GKVNIHSIGF RFSSDLQSME TSALGLTQIN RENIQKPGKL

QLSLPFEARL NASMGPGRTV VIKGEVNTNA RSFNVDLVAG KTRDIALHLN PRLNVKAFVR NSFLQDAWGE EERNITCFPF SSGMYFEMII YCDVREFKVA INGVHSLEYK HRFKDLSSID TLSVDGDIRL LDVRSW Sequence without tag. The proposed Strep-Tag is based on experience s with the expression

system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

• Made in Germany - from design to production - by highly experienced protein experts.

• Protein expressed with ALiCE® and purified in one-step affinity chromatography

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

## Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

## Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

## Target Details

Target:	LGALS8
Alternative Name:	Lgals8 (LGALS8 Products)
Background:	Galectin-8 (Gal-8) (LGALS-8),FUNCTION: Beta-galactoside-binding lectin that acts as a sensor

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/4 | Product datasheet for ABIN3130276 | 10/08/2024 | Copyright antibodies-online. 	of membrane damage caused by infection and restricts the proliferation of infecting pathogens	
	by targeting them for autophagy. Detects membrane rupture by binding beta-galactoside	
	ligands located on the lumenal side of the endosome membrane, these ligands becoming	
	exposed to the cytoplasm following rupture. Restricts infection by initiating autophagy via	
	interaction with CALCOCO2/NDP52. Required to restrict infection of bacterial invasion such as	
	S.typhimurium. Also required to restrict infection of Picornaviridae viruses. Has a marked	
	preference for 3'-O-sialylated and 3'-O-sulfated glycans. {ECO:0000250 UniProtKB:000214}.	
Molecular Weight:	36.2 kDa	
UniProt:	Q9JL15	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies	
	as well. As the protein has not been tested for functional studies yet we cannot offer a	
	guarantee though.	
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from	
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce	
	even the most difficult-to-express proteins, including those that require post-translational	
	modifications.	
	During lysate production, the cell wall and other cellular components that are not required for	
	protein production are removed, leaving only the protein production machinery and the	
	mitochondria to drive the reaction. During our lysate completion steps, the additional	
	components needed for protein production (amino acids, cofactors, etc.) are added to produce	
	something that functions like a cell, but without the constraints of a living system - all that's	
	needed is the DNA that codes for the desired protein!	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,	
	please contact us.	
Handling Advice:	please contact us. Avoid repeated freeze-thaw cycles.
