EYA2 Protein (AA 1-532) (His tag)

Image

Go to Product page

Overview

Quantity:	1 mg
Target:	EYA2
Protein Characteristics:	AA 1-532
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This EYA2 protein is labelled with His tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB), Crystallization (Crys)

Product Details

Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Mouse Eya2 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in baculovirus infected SF9 insect cells:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Protein is endotoxin free.

Grade:

Crystallography grade

Target Details

Target:	EYA2
Alternative Name:	Eya2 (EYA2 Products)
Background:	Functions both as protein phosphatase and as transcriptional coactivator for SIX1, and
	probably also for SIX2, SIX4 and SIX5 (PubMed:10490620, PubMed:17098221). Tyrosine
	phosphatase that dephosphorylates 'Tyr-142' of histone H2AX (H2AXY142ph) and promotes
	efficient DNA repair via the recruitment of DNA repair complexes containing MDC1. 'Tyr-142'
	phosphorylation of histone H2AX plays a central role in DNA repair and acts as a mark that
	distinguishes between apoptotic and repair responses to genotoxic stress. Its function as
	histone phosphatase may contribute to its function in transcription regulation during
	organogenesis (By similarity). Plays an important role in hypaxial muscle development together
	with SIX1 and DACH2, in this it is functionally redundant with EYA1 (By similarity).
	{ECO:0000250 UniProtKB:000167, ECO:0000269 PubMed:10490620,
	ECO:0000269 PubMed:17098221}.
Molecular Weight:	59.2 kDa Including tag.
UniProt:	008575
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Handling Format:	Liquid
	Liquid 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Format:	

Handling

Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
