Datasheet for ABIN3131660 PNN Protein (AA 2-725) (His tag)

Image

Overview

Quantity:	1 mg	
Target:	PNN	
Protein Characteristics:	AA 2-725	
Origin:	Mouse	
Source:	Insect Cells	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This PNN protein is labelled with His tag.	
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)	

Product Details

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Pnn Protein (raised in E. Coli) purified by multi-step, protein-specific process to ensure crystallization grade. State of the art elegative used for pleamid design (Cone synthesis)
	State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in bacterial culture:
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target Details

Target:	PNN
Alternative Name:	Pnn (PNN Products)
Background:	Transcriptional activator binding to the E-box 1 core sequence of the E-cadherin promoter gene
	the core-binding sequence is 5'CAGGTG-3'. Capable of reversing CTBP1-mediated transcription
	repression. Auxiliary component of the splicing-dependent multiprotein exon junction complex
	(EJC) deposited at splice junction on mRNAs. The EJC is a dynamic structure consisting of
	core proteins and several peripheral nuclear and cytoplasmic associated factors that join the
	complex only transiently either during EJC assembly or during subsequent mRNA metabolism.
	Participates in the regulation of alternative pre-mRNA splicing. Associates to spliced mRNA
	within 60 nt upstream of the 5'-splice sites. Component of the PSAP complex which binds RNA
	in a sequence-independent manner and is proposed to be recruited to the EJC prior to or during
	the splicing process and to regulate specific excision of introns in specific transcription
	subsets. Involved in the establishment and maintenance of epithelia cell-cell adhesion (By
	similarity). {ECO:0000250}.
Molecular Weight:	83.3 kDa Including tag.
UniProt:	035691
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
