|------------------|---|
| | This protein is a made to order protein and will be made for the first time for your order. Our |
| | experts in the lab will ensure that you receive a correctly folded protein. |
| | The big advantage of ordering our made-to-order proteins in comparison to ordering custom |
| | made proteins from other companies is that there is no financial obligation in case the protein |
| | cannot be expressed or purified. |
| | In the unlikely event that the protein cannot be expressed or purified we do not charge anything |
| | (other companies might charge you for any performed steps in the expression process for |
| | custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression |
| | experiments or purification optimization). |
| | When you order this made-to-order protein you will only pay upon receival of the correctly |
| | folded protein. With no financial risk on your end you can rest assured that our experienced |
| | protein experts will do everything to make sure that you receive the protein you ordered. |
| | The concentration of our recombinant proteins is measured using the absorbance at 280nm. |
| | The protein's absorbance will be measured in several dilutions and is measured against its |
| | specific reference buffer. |
| | The concentration of the protein is calculated using its specific absorption coefficient. We use |
| | the Expasy's protparam tool to determine the absorption coefficient of each protein. |
| Purification: | Three step purification of membrane proteins expressed in baculovirus infected SF9 insect |
| | cells: |
| | 1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with |
| | different detergents (detergent screen). Samples are analyzed by Western blot. |
| | The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate |
| | fractions are analyzed by Western blot. |
| | 3. Protein containing fractions of the best purification are subjected to second purification step |
| | through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and |
| | Western blot. |
| Purity: | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. |
| Sterility: | 0.22 µm filtered |
| Endotoxin Level: | Protein is endotoxin-free. |
| Grade: | Crystallography grade |

| Target Details | | |
|---------------------|--|--|
| Alternative Name: | II13ra2 (IL13RA2 Products) | |
| Background: | Binds as a monomer with high affinity to interleukin-13 (IL13). | |
| | {EC0:0000269 PubMed:9725226}. | |
| Molecular Weight: | 43.3 kDa Including tag. | |
| UniProt: | O88786 | |
| Application Details | | |
| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies | |
| | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee | |
| | though. | |
| Comment: | Protein has not been tested for activity yet. In cases in which it is highly likely that the | |
| | recombinant protein with the default tag will be insoluble our protein lab may suggest a higher | |
| | molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest. | |
| | | |
| Restrictions: | For Research Use only | |
| Handling | | |
| Format: | Liquid | |
| Buffer: | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer. | |
| Handling Advice: | Avoid repeated freeze-thaw cycles. | |
| Storage: | -80 °C | |
| Storage Comment: | Store at -80°C. | |
| Expiry Date: | Unlimited (if stored properly) | |
