LEPROT Protein (AA 1-131) (Strep Tag)

()	۱ ۱	\cap	r	/1	\cap	۱ ۸	1
0	'V	ㄷ	I١	νı	\Box	V	۷

Overview	
Quantity:	1 mg
Target:	LEPROT
Protein Characteristics:	AA 1-131
Origin:	Mouse
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This LEPROT protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)
Product Details	

Purification tag / Conjugate:	This LEPROT protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)
Product Details	
Sequence:	MAGVKALVAL SFSGAIGLTF LMLGCALEDY GVYWPLFVLI FYVISPIPYF IAKRVTYDSD
	ATSSACRELA YFFTTGIVVS AFGLPVVLAR VDVIKWGACG LVLAGNAVIF LTIQGFFLVF
	GRGDDFSWEQW
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	 Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.

reported (not tested by us and not guaranteed).

• These proteins are normally active (enzymatically functional) as our customers have

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	≥ 80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details

Alternative Name: Background: Le RG de ex av Molecular Weight: UniProt: O8 Application Details Application Notes: In as	eprot (LEPROT Products) eptin receptor gene-related protein (Endospanin-1) (OB-R gene-related protein) (OB-GRP),FUNCTION: Negatively regulates leptin receptor (LEPR) cell surface expression, and thus ecreases response to leptin. Negatively regulates growth hormone (GH) receptor cell surface expression in liver. May play a role in liver resistance to GH during periods of reduced nutrient vailability. {ECO:0000269 PubMed:18042720, ECO:0000269 PubMed:19907080}. 4.3 kDa 89013

	addition to the applications listed above we expect the protein to work for functional studies is well. As the protein has not been tested for functional studies yet we cannot offer a uarantee though.	
Nicevi mo Du pro mi co so	LiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from icotiana tabacum c.v This contains all the protein expression machinery needed to produce wen the most difficult-to-express proteins, including those that require post-translational nodifications. uring lysate production, the cell wall and other cellular components that are not required for rotein production are removed, leaving only the protein production machinery and the nitochondria to drive the reaction. 	or Research Use only	
Handling		
Format: Lic	iquid	
	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.	
Handling Advice: Av		
Storage: -80	void repeated freeze-thaw cycles.	

Handling

Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
