Datasheet for ABIN3132883 CD79a Protein (AA 29-220) (rho-1D4 tag)

Quantity:	1 mg
Target:	CD79a (CD79A)
Protein Characteristics:	AA 29-220
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CD79a protein is labelled with rho-1D4 tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys)
Product Details	
Sequence:	LRVEGGPPSL TVNLGEEARL TCENNGRNPN ITWWFSLQSN ITWPPVPLGP GQGTTGQLFF
	PEVNKNHRGL YWCQVIENNI LKRSCGTYLR VRNPVPRPFL DMGEGTKNRI ITAEGIILLF
	CAVVPGTLLL FRKRWQNEKF GVDMPDDYED ENLYEGLNLD DCSMYEDISR GLQGTYQDVG
	NLHIGDAQLE KP
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Cd79a Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
	State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 1/4 | Product datasheet for ABIN3132883 | 05/01/2024 | Copyright antibodies-online. 	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect
	cells:
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with
	different detergents (detergent screen). Samples are analyzed by Western blot.
	2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tog via two rho1D4 antibody columns; one DTT register the other and not. Fluete
	rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
	3. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin-free.
Grade:	Crystallography grade
Target Details	
Target:	CD79a (CD79A)
Alternative Name:	Cd79a (CD79A Products)
Background:	Required in cooperation with CD79B for initiation of the signal transduction cascade activated

	by binding of antigen to the B-cell antigen receptor complex (BCR) which leads to internalization
	of the complex, trafficking to late endosomes and antigen presentation. Also required for BCR
	surface expression and for efficient differentiation of pro- and pre-B-cells. Stimulates SYK
	autophosphorylation and activation. Binds to BLNK, bringing BLNK into proximity with SYK and
	allowing SYK to phosphorylate BLNK. Also interacts with and increases activity of some Src-
	family tyrosine kinases. Represses BCR signaling during development of immature B-cells.
