Datasheet for ABIN3132893 APP Protein (AA 18-770) (rho-1D4 tag)

/er	

Quantity:	1 mg	
Target:	APP	
Protein Characteristics:	AA 18-770	
Origin:	Mouse	
Source:	Insect Cells	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This APP protein is labelled with rho-1D4 tag.	
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys)	

Product Details

	VDAAVTPEER HLSKMQQNGY ENPTYKFFEQ MQN
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse App Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:
	 Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered

Product Details

Endotoxin Level:	Protein is endotoxin-free.
Grade:	Crystallography grade

Target Details

Target:	APP
Alternative Name:	App (APP Products)
Background:	Functions as a cell surface receptor and performs physiological functions on the surface of
	neurons relevant to neurite growth, neuronal adhesion and axonogenesis. Involved in cell
	mobility and transcription regulation through protein-protein interactions. Can promote
	transcription activation through binding to APBB1-KAT5 and inhibit Notch signaling through
	interaction with Numb. Couples to apoptosis-inducing pathways such as those mediated by
	G(O) and JIP. Inhibits G(o) alpha ATPase activity (By similarity). Acts as a kinesin I membrane
	receptor, mediating the axonal transport of beta-secretase and presenilin 1. May be involved ir
	copper homeostasis/oxidative stress through copper ion reduction. Can regulate neurite
	outgrowth through binding to components of the extracellular matrix such as heparin and
	collagen I and IV (By similarity). The splice isoforms that contain the BPTI domain possess
	protease inhibitor activity. Induces a AGER-dependent pathway that involves activation of p38
	MAPK, resulting in internalization of amyloid-beta peptide and leading to mitochondrial
	dysfunction in cultured cortical neurons (By similarity). Provides Cu(2+) ions for GPC1 which
	are required for release of nitric oxide (NO) and subsequent degradation of the heparan sulfate
	chains on GPC1. {ECO:0000250, ECO:0000269 PubMed:15677459}., Beta-amyloid peptides are
	lipophilic metal chelators with metal-reducing activity. Binds transient metals such as copper,
	zinc and iron. Rat and mouse beta-amyloid peptides bind only weakly transient metals and hav
	little reducing activity due to substitutions of transient metal chelating residues. Beta-APP42
	may activate mononuclear phagocytes in the brain and elicit inflammatory responses.
	Promotes both tau aggregation and TPK II-mediated phosphorylation. Also binds GPC1 in lipic
	rafts (By similarity). {ECO:0000250}., The gamma-CTF peptides as well as the caspase-cleaved
	peptides, including C31, are potent enhancers of neuronal apoptosis.
	{ECO:0000269 PubMed:15677459}., N-APP binds TNFRSF21 triggering caspase activation and
	degeneration of both neuronal cell bodies (via caspase-3) and axons (via caspase-6).
	{ECO:0000250}.
Molecular Weight:	86.1 kDa Including tag.
UniProt:	P12023

Target Details	
Pathways:	Caspase Cascade in Apoptosis, EGFR Signaling Pathway, Transition Metal Ion Homeostasis, Skeletal Muscle Fiber Development, Toll-Like Receptors Cascades, Feeding Behaviour
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
