## Datasheet for ABIN3133026 Insulin Receptor Protein (INSR) (AA 28-748) (His tag)

Overview

Image

Quantity:	1 mg
Target:	Insulin Receptor (INSR)
Protein Characteristics:	AA 28-748
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This Insulin Receptor protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

## Product Details

Sequence:	HLYPGEVCPG MDIRNNLTRL HELENCSVIE GHLQILLMFK TRPEDFRDLS FPKLIMITDY

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Insr Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Protein containing fractions of the best purification are subjected to second purification step</li> </ol>
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target Details	
Target:	Insulin Receptor (INSR)
Alternative Name:	Insr (INSR Products)
Background:	Receptor tyrosine kinase which mediates the pleiotropic actions of insulin. Binding of insulin
	leads to phosphorylation of several intracellular substrates, including, insulin receptor
	substrates (IRS1, 2, 3, 4), SHC, GAB1, CBL and other signaling intermediates. Each of these
	phosphorylated proteins serve as docking proteins for other signaling proteins that contain Src-
	homology-2 domains (SH2 domain) that specifically recognize different phosphotyrosines
	residues, including the p85 regulatory subunit of PI3K and SHP2. Phosphorylation of IRSs
	proteins lead to the activation of two main signaling pathways: the PI3K-AKT/PKB pathway,
	which is responsible for most of the metabolic actions of insulin, and the Ras-MAPK pathway,
	which regulates expression of some genes and cooperates with the PI3K pathway to control
	cell growth and differentiation. Binding of the SH2 domains of PI3K to phosphotyrosines on
	IRS1 leads to the activation of PI3K and the generation of phosphatidylinositol-(3, 4, 5)-
	triphosphate (PIP3), a lipid second messenger, which activates several PIP3-dependent
	serine/threonine kinases, such as PDPK1 and subsequently AKT/PKB. The net effect of this
	pathway is to produce a translocation of the glucose transporter SLC2A4/GLUT4 from
	cytoplasmic vesicles to the cell membrane to facilitate glucose transport. Moreover, upon
	insulin stimulation, activated AKT/PKB is responsible for: anti-apoptotic effect of insulin by
	inducing phosphorylation of BAD, regulates the expression of gluconeogenic and lipogenic
	enzymes by controlling the activity of the winged helix or forkhead (FOX) class of transcription
	factors. Another pathway regulated by PI3K-AKT/PKB activation is mTORC1 signaling pathway
	which regulates cell growth and metabolism and integrates signals from insulin. AKT mediates
	insulin-stimulated protein synthesis by phosphorylating TSC2 thereby activating mTORC1
	pathway. The Ras/RAF/MAP2K/MAPK pathway is mainly involved in mediating cell growth,
	survival and cellular differentiation of insulin. Phosphorylated IRS1 recruits GRB2/SOS complex
	which triggers the activation of the Ras/RAF/MAP2K/MAPK pathway. In addition to binding
	insulin, the insulin receptor can bind insulin-like growth factors (IGFI and IGFII). When present ir
	a hybrid receptor with IGF1R, binds IGF1 (By similarity). {ECO:0000250}.
Molecular Weight:	83.6 kDa Including tag.
UniProt:	P15208
Pathways:	NF-kappaB Signaling, RTK Signaling, AMPK Signaling, Carbohydrate Homeostasis, Regulation
	of Cell Size, Regulation of Carbohydrate Metabolic Process, Growth Factor Binding, Negative
	Regulation of Transporter Activity

Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
