antibodies

## Datasheet for ABIN3133082 PKC epsilon Protein (AA 1-737) (His tag)

1 Image

Overview

Quantity:	1 mg
Target:	PKC epsilon (PRKCE)
Protein Characteristics:	AA 1-737
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PKC epsilon protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

## Product Details

Sequence:	MVVFNGLLKI KICEAVSLKP TAWSLRHAVG PRPQTFLLDP YIALNVDDSR IGQTATKQKT

	NQEEFKGFSY FGEDLMP Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.	
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Prkce Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>	
	This protein is a made to order protein and will be made for the first time for your order. Our	
	experts in the lab will ensure that you receive a correctly folded protein.	
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom	
	made proteins from other companies is that there is no financial obligation in case the protein	
	cannot be expressed or purified.	
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything	
	(other companies might charge you for any performed steps in the expression process for	
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression	
	experiments or purification optimization).	
	When you order this made-to-order protein you will only pay upon receival of the correctly	
	folded protein. With no financial risk on your end you can rest assured that our experienced	
	protein experts will do everything to make sure that you receive the protein you ordered.	
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.	
	The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.	
	The concentration of the protein is calculated using its specific absorption coefficient. We use	
	the Expasy's protparam tool to determine the absorption coefficient of each protein.	
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:	
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Destription proteining for stimula of the bast purification provide the second purification step.</li> </ol>	
	<ol> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>	
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.	
Sterility:	0.22 μm filtered	
Endotoxin Level:	Protein is endotoxin free.

Crystallography grade

## Target Details

Target:	PKC epsilon (PRKCE)
Alternative Name:	Prkce (PRKCE Products)
Background:	Calcium-independent, phospholipid- and diacylglycerol (DAG)-dependent serine/threonine-
	protein kinase that plays essential roles in the regulation of multiple cellular processes linked to
	cytoskeletal proteins, such as cell adhesion, motility, migration and cell cycle, functions in
	neuron growth and ion channel regulation, and is involved in immune response, cancer cell
	invasion and regulation of apoptosis. Mediates cell adhesion to the extracellular matrix via
	integrin-dependent signaling, by mediating angiotensin-2-induced activation of integrin beta-1
	(ITGB1) in cardiac fibroblasts. Phosphorylates MARCKS, which phosphorylates and activates
	PTK2/FAK, leading to the spread of cardiomyocytes. Involved in the control of the directional
	transport of ITGB1 in mesenchymal cells by phosphorylating vimentin (VIM), an intermediate
	filament (IF) protein. In epithelial cells, associates with and phosphorylates keratin-8 (KRT8),
	which induces targeting of desmoplakin at desmosomes and regulates cell-cell contact.
	Phosphorylates IQGAP1, which binds to CDC42, mediating epithelial cell-cell detachment prior
	to migration. During cytokinesis, forms a complex with YWHAB, which is crucial for daughter
	cell separation, and facilitates abscission by a mechanism which may implicate the regulation
	of RHOA. In cardiac myocytes, regulates myofilament function and excitation coupling at the Z
	lines, where it is indirectly associated with F-actin via interaction with COPB1. During
	endothelin-induced cardiomyocyte hypertrophy, mediates activation of PTK2/FAK, which is
	critical for cardiomyocyte survival and regulation of sarcomere length. Plays a role in the
	pathogenesis of dilated cardiomyopathy via persistent phosphorylation of troponin I (TNNI3).
	Involved in nerve growth factor (NFG)-induced neurite outgrowth and neuron morphological
	change independently of its kinase activity, by inhibition of RHOA pathway, activation of CDC42
	and cytoskeletal rearrangement. May be involved in presynaptic facilitation by mediating
	phorbol ester-induced synaptic potentiation. Phosphorylates gamma-aminobutyric acid
	receptor subunit gamma-2 (GABRG2), which reduces the response of GABA receptors to
	ethanol and benzodiazepines and may mediate acute tolerance to the intoxicating effects of
	ethanol. Upon PMA treatment, phosphorylates the capsaicin- and heat-activated cation channe
	TRPV1, which is required for bradykinin-induced sensitization of the heat response in
	nociceptive neurons. Is able to form a complex with PDLIM5 and N-type calcium channel, and
	may enhance channel activities and potentiates fast synaptic transmission by phosphorylating
	the pore-forming alpha subunit CACNA1B (CaV2.2). Downstream of TLR4, plays an important

	role in the lipopolysaccharide (LPS)-induced immune response by phosphorylating and activating TICAM2/TRAM, which in turn activates the transcription factor IRF3 and subsequent cytokines production. In differentiating erythroid progenitors, is regulated by EPO and controls the protection against the TNFSF10/TRAIL-mediated apoptosis, via BCL2. May be involved in
	the regulation of the insulin-induced phosphorylation and activation of AKT1. {ECO:0000269 PubMed:11746497, ECO:0000269 PubMed:12407104,
	ECO:0000269 PubMed:15949469, ECO:0000269 PubMed:16270034,

	ECO:0000269 PubMed:18604201}.
Molecular Weight:	84.5 kDa Including tag.
UniProt:	P16054
Pathways:	TCR Signaling, EGFR Signaling Pathway, Neurotrophin Signaling Pathway, Positive Regulation
	of Peptide Hormone Secretion, Activation of Innate immune Response, Cellular Response to
	Molecule of Bacterial Origin, Regulation of Actin Filament Polymerization, Myometrial
	Relaxation and Contraction, Regulation of Carbohydrate Metabolic Process, Interaction of EGFR
	with phospholipase C-gamma, Thromboxane A2 Receptor Signaling
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
