

Datasheet for ABIN3133577 IPP Protein (AA 1-584) (Strep Tag)

Overview

Quantity:	250 μg
Target:	IPP
Protein Characteristics:	AA 1-584
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This IPP protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Brand:	AliCE®	
Sequence:	MSKEECPKAA DNSFSSDKHA QLILAQMNKM RSGQHFCDVQ LQVGKETFQV HRLVLAASSP	
	YFAALFTGGM KESSKDVVQI LGVEAGIFQL LLDFIYTGVV NIAVTNVQEL IVAADMLQLT	
	EVVNLCCDFL KGQIDPQNCI GLFQFSEQIA CHDLLEFTEN YIHVHFLEVH TGEEFLGLTK	
	DQLIKILRSE ELSIEDEYQV FLAAMQWILK DLGKRRKHVV EVLDPVRFPL LPSQRLLKYI	
	EGVSDFNLRV ALQTLLKEYC EVCKSPKENK FCSFLQTSKV RPRKKARKYL YAVGGYTRLQ	
	GGRWSDSRAL SCVERFDTFS QYWTTVSSLH QARCGLGVAV VGGMVYAIGG EKDSMIFDCT	
	ECYDPVTKQW TTVASMNHPR CGLGVCVCYG AIYALGGWVG AEIGNTIERF DPDENKWEVV	
	GSMAVSRYYF GCCEMQGLIY AVGGISNEGL ELRSFEVYDP LSKRWSPLPP MGTRRAYLGV	
	AALNDCIYAI GGWNETQDAL HTVEKYSFEE EKWVEVASMK VPRAGMCAVT VNGLLYVSGG	
	RSSSHDFLAP GTLDSVEVYN PHSDTWTEIG NMITSRCEGG VAVL	
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression

	system, a different complexity of the protein could make another tag necessary. In case you		
	have a special request, please contact us.		
Characteristics:	Key Benefits:		
	 Made in Germany - from design to production - by highly experienced protein experts. Protein expressed with ALiCE® and purified in one-step affinity chromatography These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed). State-of-the-art algorithm used for plasmid design (Gene synthesis). 		
	This protein is a made-to-order protein and will be made for the first time for your order. Our		
	experts in the lab try to ensure that you receive soluble protein.		
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom		
	made proteins from other companies is that there is no financial obligation in case the protein		
	cannot be expressed or purified.		
	Expression System:		
	 ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required fo protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein! 		
	Concentration:		
	 The concentration of our recombinant proteins is measured using the absorbance at 280nm The protein's absorbance will be measured against its specific reference buffer. We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein. 		
Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).		
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).		

Grade:

custom-made

Target Details		
Target:	IPP	
Alternative Name:	Ipp (IPP Products)	
Background:	Actin-binding protein IPP (Intracisternal A particle-promoted polypeptide) (IPP) (Murine IAP- promoted placenta-expressed protein) (Protein MIPP),FUNCTION: May play a role in organizing the actin cytoskeleton.	
Molecular Weight:	65.2 kDa	
UniProt:	P28575	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.	
Comment:	 ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein! 	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C
