# Datasheet for ABIN3133619 EPH Receptor A3 Protein (EPHA3) (AA 565-983) (His tag)

Overview

Image

Quantity:	1 mg
Target:	EPH Receptor A3 (EPHA3)
Protein Characteristics:	AA 565-983
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This EPH Receptor A3 protein is labelled with His tag.
Application:	Western Blotting (WB), ELISA, SDS-PAGE (SDS), Crystallization (Crys)

#### Product Details

Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Epha3 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> </ul>
	special request, please contact us.
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

	State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	1. In a first purification step, the protein is purified from the cleared cell lysate using three
	different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	
Purity: Sterility:	Western blot.
	Western blot. >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	Western blot. >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. 0.22 µm filtered
Sterility: Endotoxin Level: Grade:	Western blot. >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. 0.22 µm filtered Protein is endotoxin free.
Sterility: Endotoxin Level: Grade: Target Details	Western blot. >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. 0.22 µm filtered Protein is endotoxin free. Crystallography grade
Sterility: Endotoxin Level: Grade:	Western blot. >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. 0.22 µm filtered Protein is endotoxin free.

## Target Details

Background:	Receptor tyrosine kinase which binds promiscuously membrane-bound ephrin family ligands
	residing on adjacent cells, leading to contact-dependent bidirectional signaling into neighboring
	cells. The signaling pathway downstream of the receptor is referred to as forward signaling
	while the signaling pathway downstream of the ephrin ligand is referred to as reverse signaling.
	Highly promiscuous for ephrin-A ligands it binds preferentially EFNA5. Upon activation by
	EFNA5 regulates cell-cell adhesion, cytoskeletal organization and cell migration. Plays a role in
	cardiac cells migration and differentiation and regulates the formation of the atrioventricular
	canal and septum during development probably through activation by EFNA1. Involved in the
	retinotectal mapping of neurons. May also control the segregation but not the guidance of
	motor and sensory axons during neuromuscular circuit development.
	{ECO:0000269 PubMed:17046737, ECO:0000269 PubMed:18403711,
	ECO:0000269 PubMed:19505147}.
Molecular Weight:	47.9 kDa Including tag.
UniProt:	P29319
Pathways:	RTK Signaling, Regulation of Cell Size

### Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

### Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
