Quantity:	250 μg
Target:	P2RY2
Protein Characteristics:	AA 1-373
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This P2RY2 protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

Brand:	AliCE®
Sequence:	MAADLEPWNS TINGTWEGDE LGYKCRFNED FKYVLLPVSY GVVCVLGLCL NVVALYIFLC
	RLKTWNASTT YMFHLAVSDS LYAASLPLLV YYYARGDHWP FSTVLCKLVR FLFYTNLYCS
	ILFLTCISVH RCLGVLRPLH SLRWGRARYA RRVAAVVWVL VLACQAPVLY FVTTSVRGTR
	ITCHDTSARE LFSHFVAYSS VMLGLLFAVP FSVILVCYVL MARRLLKPAY GTTGGLPRAK
	RKSVRTIALV LAVFALCFLP FHVTRTLYYS FRSLDLSCHT LNAINMAYKI TRPLASANSC
	LDPVLYFLAG QRLVRFARDA KPPTEPTPSP QARRKLGLHR PNRTVRKDLS VSSDDSRRTE
	STPAGSETKD IRL
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.

- Made in Germany from design to production by highly experienced protein experts.
- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- · State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- · We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made
Target Details	
Target:	P2RY2

Target Details

rarget Details		
Alternative Name:	P2ry2 (P2RY2 Products)	
Background:	P2Y purinoceptor 2 (P2Y2) (ATP receptor) (P2U purinoceptor 1) (P2U1) (Purinergic	
	receptor),FUNCTION: Receptor for ATP and UTP coupled to G-proteins that activate a	
	phosphatidylinositol-calcium second messenger system. The affinity range is UTP = ATP >	
	ATP-gamma-S >> 2-methylthio-ATP = ADP.	
Molecular Weight:	42.2 kDa	
UniProt:	P35383	
Pathways:	Cellular Response to Molecule of Bacterial Origin, Smooth Muscle Cell Migration	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies	
	as well. As the protein has not been tested for functional studies yet we cannot offer a	
	guarantee though.	
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from	
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce	
	even the most difficult-to-express proteins, including those that require post-translational	
	modifications.	
	During lysate production, the cell wall and other cellular components that are not required for	
	protein production are removed, leaving only the protein production machinery and the	
	mitochondria to drive the reaction. During our lysate completion steps, the additional	
	components needed for protein production (amino acids, cofactors, etc.) are added to produce	
	something that functions like a cell, but without the constraints of a living system - all that's	
	needed is the DNA that codes for the desired protein!	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer.	
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	

Handling

Storage Comment:	Store at -80°C.		
Expiry Date:	12 months
