antibodies

Datasheet for ABIN3134252 PTPRE Protein (AA 20-699) (rho-1D4 tag)

Overview

Image

Quantity:	1 mg
Target:	PTPRE
Protein Characteristics:	AA 20-699
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PTPRE protein is labelled with rho-1D4 tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:	GQGNDTTPTE SNWTSTTAGP PDPGASQPLL TWLLLPLLLL LFLLAAYFFR FRKQRKAVVS

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Ptpre Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.
	2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
	3. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered

Product Details	
Endotoxin Level:	Protein is endotoxin-free.
Grade:	Crystallography grade

Target Details

Target:	PTPRE
Alternative Name:	Ptpre (PTPRE Products)
Background:	Isoform 1 acts as a negative regulator of insulin receptor (IR) signaling and is involved in
	insulin-induced glucose metabolism mainly through direct dephosphorylation and inactivation
	of IR in hepatocytes and liver (By similarity). Plays a critical role in signaling transduction
	pathways and phosphoprotein network topology in red blood cells. May play a role in osteoclas
	formation and function. {ECO:0000250, ECO:0000269 PubMed:19508371,
	ECO:0000269 PubMed:8610169}., Isoform 2 acts as a negative regulator of insulin receptor (IR)
	signaling in skeletal muscle. Regulates insulin-induced tyrosine phosphorylation of insulin
	receptor (IR) and insulin receptor substrate 1 (IRS-1), phosphorylation of protein kinase B and
	glycogen synthase kinase-3 and insulin induced stimulation of glucose uptake., Isoform 1 and
	isoform 2 act as a negative regulator of FceRI-mediated signal transduction leading to cytokine
	production and degranulation, most likely by acting at the level of SYK to affect downstream
	events such as phosphorylation of SLP76 and LAT and mobilization of Ca(2+).
Molecular Weight:	79.8 kDa Including tag.
UniProt:	P49446
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
