Datasheet for ABIN3134923 MOCOS Protein (AA 1-862) (His tag)

Image

Overview

Quantity:	1 mg
Target:	MOCOS
Protein Characteristics:	AA 1-862
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This MOCOS protein is labelled with His tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

experts in the lab will ensure that you receive a correctly folded protein.	o ordering custom
	o ordering custom
The big advantage of ordering our made-to-order proteins in comparison to	
made proteins from other companies is that there is no financial obligatior	n in case the protein
cannot be expressed or purified.	
In the unlikely event that the protein cannot be expressed or purified we do	not charge anything
(other companies might charge you for any performed steps in the express	sion process for
custom-made proteins, e.g. fees might apply for the expression plasmid, th	ne first expression
experiments or purification optimization).	
When you order this made-to-order protein you will only pay upon receival	of the correctly
folded protein. With no financial risk on your end you can rest assured that	our experienced
protein experts will do everything to make sure that you receive the protein	you ordered.
The concentration of our recombinant proteins is measured using the abso	orbance at 280nm.
The protein's absorbance will be measured in several dilutions and is meas	sured against its
specific reference buffer.	
The concentration of the protein is calculated using its specific absorption	coefficient. We use
the Expasy's protparam tool to determine the absorption coefficient of eac	h protein.
Purification: Two step purification of proteins expressed in baculovirus infected SF9 ins	sect cells:
 In a first purification step, the protein is purified from the cleared cell lyst different His-tag capture materials: high yield, EDTA resistant, or DTT res fractions are analyzed by SDS-PAGE. 	0
2. Protein containing fractions of the best purification are subjected to sec through size exclusion chromatography. Eluate fractions are analyzed by Western blot.	
Purity: >95 % as determined by SDS PAGE, Size Exclusion Chromatography and W	lestern Blot.
Sterility: 0.22 µm filtered

Product Details	
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target Details

0	
Target:	MOCOS
Alternative Name:	Mocos (MOCOS Products)
Background:	Sulfurates the molybdenum cofactor. Sulfation of molybdenum is essential for xanthine dehydrogenase (XDH) and aldehyde oxidase (ADO) enzymes in which molybdenum cofactor is liganded by 1 oxygen and 1 sulfur atom in active form. {ECO:0000255 HAMAP-Rule:MF_03050}.
Molecular Weight:	96.0 kDa Including tag.
UniProt:	Q14CH1
Pathways:	Response to Water Deprivation, ER-Nucleus Signaling
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
