SLC25A33 Protein (AA 1-320) (rho-1D4 tag)

Image

Go to Product page

Overview

Quantity:	1 mg
Target:	SLC25A33
Protein Characteristics:	AA 1-320
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This SLC25A33 protein is labelled with rho-1D4 tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

Product Details

Sequence:

MATGTQQKEN TLLHLFAGGC GGTVGAIFTC PLEVIKTRLQ SSRLALRTVY YPQVHLGTIS
GAGMVRPTSV TPGLLQVLKS ILEKEGPKSL FRGLGPNLVG VAPSRAVYFA CYSKAKEQFN
GIFVPNSNTV HILSAGSAAF VTNTLMNPIW MVKTRMQLER KVRGCKQMNT LQCARRVYQT
EGVRGFYRGL TASYAGISET IICFAIYESL KKCLKDAPIV SSTDGAEKSS SGFFGLMAAA
AVSKGCASCI AYPHEVIRTR LREEGSKYRS FVQTARLVFR EEGYLAFYRG LFAQLIRQIP
NTAIVLSTYE FIVYLLGERA

Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Mouse Slc25a33 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:

- 1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.
- 2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 μm filtered
Endotoxin Level:	Protein is endotoxin-free.
Grade:	Crystallography grade

Target Details

Target:	SLC25A33	

Target Details

Alternative Name:	Slc25a33 (SLC25A33 Products)	
Background:	Mitochondrial transporter that imports/exports pyrimidine nucleotides into and from	
	mitochondria. Transports preferentially uracil, thymine, and cytosine (deoxy)nucleoside di- and	
	triphosphates by an antiport mechanism. Also transports guanine but not adenine	
	(deoxy)nucleotides. Is inhibited strongly by pyridoxal 5'-phosphate, 4,7-diphenyl-1,10-	
	phenanthroline, tannic acid, and mercurials (mercury dichloride, mersalyl acid, p-	
	hydroxymercuribenzoate). Participates in mitochondrial genome maintenance, regulation of	
	mitochondrial membrane potential and mitochondrial respiration (By similarity). Upon INS or	
	IGF1 stimulation regulates cell growth and proliferation by controlling mitochondrial DNA	
	replication and transcription, the ratio of mitochondria-to nuclear-encoded components of the	
	electron transport chain resulting in control of mitochondrial ROS production	
	(PubMed:17596519). Participates in dendritic cell endocytosis and may associate with	
	mitochondrial oxidative phosphorylation (By similarity). {ECO:0000250 UniProtKB:Q9BSK2,	
	ECO:0000269 PubMed:17596519}.	
Molecular Weight:	36.2 kDa Including tag.	
UniProt:	Q3TZX3	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies	
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.	
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the	
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher	
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible	
	options with you in detail to assure that you receive your protein of interest.	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	

Handling

Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
