Datasheet for ABIN3135161

CENPJ Protein (AA 1-1344) (Strep Tag)

Go to Product page

Overview

Quantity:	250 µg
Target:	CENPJ
Protein Characteristics:	AA 1-1344
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This CENPJ protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

Product Details

Brand:	AliCE®
Sequence:	MFLMPTSSEL NSGQNFLTQW MTSPSRAGVI LNRGFPILEA DDKQAATNVS TSFPAKATHF SNSFSISSEE DSFHEEQKLE AGGPYKPWSE NPEAPPVFPS VRKEPIASRQ DAPGCQEDNN NDLTPHLESE FKEVANKNPL FKKLEQLKEI QQKKQEQLKR QQLEQLQRLM EEQEKLLTMV SAQHAFPGTL LPDDQSQKHR SPGDLTLPPH SYSNPTQENS CASNVLPDEQ SNFCRATQDS VLTSKNASDL FYESQYQEAH VKRNDLKEES PAHPSGEGAL PRWEKKMGRS QEGKDVNLQK CGDSSEVVNI DERPIKAAVR EKQQTFEDYL EEQIQLEERE LRQKQLQEAE GPLLAKTKPK QPFLKRGEGL ARFTNAKSKF QKGKESKLAS TQSPSEDQPG SKVDRQHLQR KTALINKDLC AETPTVKKDS KARPKAGFAS LRQKPKVTKT NMRESLSPPG LKVQTGKKRD GQFRHQVKGE RNAHASNKEN VPACIKPWDA GCKMWSKTQG RERLPLSTGP VGCVVSRSPI RETDRETESS LDFSLQKKLE IWEREKEKEN LELDEFLFLE RAADEISFSS NSSFVLRILE RDQQICDGHR LSSTPVKAVQ QREAQQADPR GQSNCSEIPR YGVAHENESE CEAMLLSWGS GSPDGLRELS

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany - from design to production - by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to

Product Details

	produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
	Concentration: • The concentration of our recombinant proteins is measured using the absorbance at 280nm. • The protein's absorbance will be measured against its specific reference buffer. • We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.
Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	CENPJ
Alternative Name:	Cenpj (CENPJ Products)
Background:	Centromere protein J (CENP-J),FUNCTION: Plays an important role in cell division and centrosome function by participating in centriole duplication. Inhibits microtubule nucleation from the centrosome. Involved in the regulation of slow processive growth of centriolar microtubules. Acts as microtubule plus-end tracking protein that stabilizes centriolar microtubules and inhibits microtubule polymerization and extension from the distal ends of centrioles. Required for centriole elongation and for STIL-mediated centriole amplification. Required for the recruitment of CEP295 to the proximal end of new-born centrioles at the centriolar microtubule wall during early S phase in a PLK4-dependent manner. May be involved in the control of centriolar-microtubule growth by acting as a regulator of tubulin release (By similarity). {ECO:0000250|UniProtKB:Q9HC77}.
Molecular Weight:	153.1 kDa
UniProt:	Q569L8
Pathways:	M Phase

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies

Application Details

	as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol **Might differ depending on protein.**
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
