# Datasheet for ABIN3135167 E2F8 Protein (AA 1-860) (His tag)

Image

#### Overview

Quantity:	1 mg
Target:	E2F8
Protein Characteristics:	AA 1-860
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This E2F8 protein is labelled with His tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse E2f8 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> </ol>
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered

Product Details	
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

# Target Details

Target:	E2F8
Alternative Name:	E2f8 (E2F8 Products)
Background:	Atypical E2F transcription factor that participates in various processes such as angiogenesis
	and polyploidization of specialized cells. Mainly acts as a transcription repressor that binds
	DNA independently of DP proteins and specifically recognizes the E2 recognition site 5'-
	TTTC[CG]CGC-3'. Directly represses transcription of classical E2F transcription factors such as
	E2F1: component of a feedback loop in S phase by repressing the expression of E2F1, thereby
	preventing p53/TP53-dependent apoptosis. Plays a key role in polyploidization of cells in
	placenta and liver by regulating the endocycle, probably by repressing genes promoting
	cytokinesis and antagonizing action of classical E2F proteins (E2F1, E2F2 and/or E2F3).
	Required for placental development by promoting polyploidization of trophoblast giant cells.
	Acts as a promoter of sprouting angiogenesis, possibly by acting as a transcription activator:
	associates with HIF1A, recognizes and binds the VEGFA promoter, which is different from
	canonical E2 recognition site, and activates expression of the VEGFA gene.
	{EC0:0000269 PubMed:18194653, EC0:0000269 PubMed:22516201,
	EC0:0000269 PubMed:22903062, EC0:0000269 PubMed:23064264,
	EC0:0000269 PubMed:23064266}.
Molecular Weight:	94.2 kDa Including tag.
UniProt:	Q58FA4
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.

## Application Details

#### Restrictions:

For Research Use only

# Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
