Datasheet for ABIN3135175 CHSY3 Protein (AA 1-884) (rho-1D4 tag)

Overview

Image

Quantity:	1 mg
Target:	CHSY3
Protein Characteristics:	AA 1-884
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CHSY3 protein is labelled with rho-1D4 tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), Crystallization (Crys), ELISA

Product Details

Sequence:	MAVRSRRPWV SVALGLVLGF TAASWLIAPR VAELSEKRRR GSSLCSYYGR SATGPRADAQ

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Chsy3 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:
	 Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.

UDP-GaINAc to the non-reducing end of the elongating chondroitin polymer. Specific activity much reduced compared to CHSY1 (By similarity). (EC0:0000250). Molecular Weight: 101.3 kDa Including tag. UniProt: QSDTK1 Pathways: Glycosaminoglycan Metabolic Process Application Details In addition to the applications listed above we expect the protein to work for functional studia as well. As the protein has not been tested for functional studies yet we cannot offer a gurar though. Comment: Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a high molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest. Restrictions: For Research Use only Handling Liquid	Product Details	
Endotoxin Level: Protein is endotoxin-free. Grade: Crystallography grade Target Details Target: Target: CHSY3 Alternative Name: Chsy3 (CHSY3 Products) Background: Has both beta-1,3-glucuronic acid and beta-1,4-N-acetylgalactosamine transferase activity. Transfers glucuronic acid (GlcUA) from UDP-GlcUA and N-acetylgalactosamine (GaINAc) fro UDP-CaINAc to the non-reducing end of the elongating chondrottin polymer. Specific activity much reduced compared to CHSY1 (By similarity). (ECO.0000250). Molecular Weight: 101.3 kDa Including tag. UniProt: QSD1K1 Pathways: Glycosaminoglycan Metabolic Process Application Details In addition to the applications listed above we expect the protein to work for functional studia as well. As the protein has not been tested for functional studies yet we cannot offer a gurar though. Comment: Protein has not been tested for activity yet, in cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a high molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest. Restrictions: For Research Use only Handling Liquid	Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Grade: Crystallography grade Target Details Target: Target: CHSY3 Alternative Name: Chsy3 (CHSY3 Products) Background: Has both beta-1,3-glucuronic acid and beta-1,4-N-acetylgalactosamine (GalNAc) from UDP-GlcJA and N-acetylgalactosamine (GalNAc) from UD	Sterility:	0.22 µm filtered
Target Details Target: CHSY3 Alternative Name: Chsy3 (CHSY3 Products) Background: Has both beta-1,3-glucuronic acid and beta-1,4-N-acetylgalactosamine (GalNAc) fro UDP-GalNAc to the non-reducing end of the elongating chondroitin polymer. Specific activity much reduced compared to CHSY1 (By similarity). (ECO.0000250). Molecular Weight: 101.3 kDa Including tag.
