antibodies

Datasheet for ABIN3135261 GYLTL1B Protein (AA 30-690) (His tag)

Overview

| Quantity: | 1 mg |
|-------------------------------|--|
| Target: | GYLTL1B |
| Protein Characteristics: | AA 30-690 |
| Origin: | Mouse |
| Source: | Insect Cells |
| Protein Type: | Recombinant |
| Purification tag / Conjugate: | This GYLTL1B protein is labelled with His tag. |
| Application: | ELISA, Crystallization (Crys), SDS-PAGE (SDS), Western Blotting (WB) |

Product Details

| | special request, please contact us. |
|------------------|--|
| Characteristics: | Made in Germany - from design to production - by highly experienced protein experts. Mouse Gyltl1b Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis). |
| | This protein is a made to order protein and will be made for the first time for your order. Our |
| | experts in the lab will ensure that you receive a correctly folded protein. |
| | The big advantage of ordering our made-to-order proteins in comparison to ordering custom |
| | made proteins from other companies is that there is no financial obligation in case the protein |
| | cannot be expressed or purified. |
| | In the unlikely event that the protein cannot be expressed or purified we do not charge anything |
| | (other companies might charge you for any performed steps in the expression process for |
| | custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression |
| | experiments or purification optimization). |
| | When you order this made-to-order protein you will only pay upon receival of the correctly |
| | folded protein. With no financial risk on your end you can rest assured that our experienced |
| | protein experts will do everything to make sure that you receive the protein you ordered. |
| | The concentration of our recombinant proteins is measured using the absorbance at 280nm. |
| | The protein's absorbance will be measured in several dilutions and is measured against its |
| | specific reference buffer. |
| | The concentration of the protein is calculated using its specific absorption coefficient. We use |
| | the Expasy's protparam tool to determine the absorption coefficient of each protein. |
| Purification: | Two step purification of proteins expressed in baculovirus infected SF9 insect cells: |
| | In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE. |
| | 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot. |
| Purity: | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. |
| Sterility: | 0.22 µm filtered |
| Endotoxin Level: | Protein is endotoxin free. |
| Grade: | Crystallography grade |

Target Details

| Target: | GYLTL1B |
|---------------------|---|
| Alternative Name: | Gyltl1b (GYLTL1B Products) |
| Background: | Bifunctional glycosyltransferase with both xylosyltransferase and beta-1,3- |
| | glucuronyltransferase activities involved in the biosynthesis of the phosphorylated O-mannosyl |
| | trisaccharide (N-acetylgalactosamine-beta-3-N-acetylglucosamine-beta-4-(phosphate-6- |
| |)mannose), a carbohydrate structure present in alpha-dystroglycan (DAG1). Phosphorylated O- |
| | mannosyl trisaccharid is required for binding laminin G-like domain-containing extracellular |
| | proteins with high affinity. Elongates the glucuronyl-beta-1,4-xylose-beta disaccharide primer |
| | structure by adding repeating units [-3-Xylose-alpha-1,3-GlcA-beta-1-] to produce a |
| | heteropolysaccharide. Has a higher activity toward alpha-dystroglycan than LARGE |
| | (PubMed:15958417). {ECO:0000269 PubMed:15958417, ECO:0000269 PubMed:23125099, |
| | EC0:0000269 PubMed:23135544, EC0:0000269 PubMed:25138275}. |
| Molecular Weight: | 77.3 kDa Including tag. |
| UniProt: | Q5XPT3 |
| Application Details | |
| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies |
| | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
| | though. |
| Comment: | Protein has not been tested for activity yet. In cases in which it is highly likely that the |
| | recombinant protein with the default tag will be insoluble our protein lab may suggest a higher |
| | molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible |
| | options with you in detail to assure that you receive your protein of interest. |
| Restrictions: | For Research Use only |
| Handling | |
| Format: | Liquid |
| Buffer: | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer. |
| Handling Advice: | Avoid repeated freeze-thaw cycles. |
| Storage: | -80 °C |
| Storage Comment: | Store at -80°C. |
