Datasheet for ABIN3135389

ARHGEF1 Protein (AA 1-920) (Strep Tag)

Overview

Quantity:	250 µg
Target:	ARHGEF1
Protein Characteristics:	AA 1-920
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This ARHGEF1 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Brand:	AliCE®
Sequence:	MGEVAGGAAP GPPRSLVSI IIGAEDDFE NELEANSEDQ NSQFQSLEQV KRRPAHLMAL LQHVALQFEP GPLLCLHAD MLSSLGPKEA KKAFLDFYHS FLEKTAVLRV PVPPSVAFEL DRTRPDLISE DVQRRFIQEV VQSQAASVSR QLEDFRSKRL MGMTPWQEQL SLLEPWIGKD RGNYEARERH VAERLLSHLE ETQHTISTDE EKSAAVTAI SLYMRHLGVR TKSGDKKSGR NFFRKKVMGN RRSDEPPKTK KGLSSILDPA RWNRGEPSAP DCRHLKVEAD AEKPGPADRK GGLGMSSRDR TVGTPGQDNP GVSLHPLSTD SVDSREPGVD TPQEPGDTTPP QGPTSLEPLA PPESTEDNGE TESPEPGDDG EPGRSGLELE PEEPPGWREL VPPDTLLSLP KSQVKRQEV SELLVTEAAH VRMLRVLHDL FYQPMADGGF FPLDELQNI FPSLDELIEVH SLFLDRLMKR RQESGYLIEE IGDVLLARFD GAEGSWFQKI SSRFCRSQSF ALEQLKAKQR KEPRFCAFVQ EAESRPRCRR LQLKDMIPT E MQR LTKYPLL LQSIGQNT EE STERGKVELA AECCREILHH VNQAVRDMED LLRLKDYQRR LDLTHLRQSS DPMLSEFKNL DITKKKLVHE GPLTWRVTKD

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany - from design to production - by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from *Nicotiana tabacum* c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Product Details

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	ARHGEF1
Alternative Name:	Arhgef1 (ARHGEF1 Products)
Background:	Rho guanine nucleotide exchange factor 1 (Lbc's second cousin) (Lymphoid blast crisis-like 2),FUNCTION: Seems to play a role in the regulation of RhoA GTPase by guanine nucleotide-binding alpha-12 (GNA12) and alpha-13 (GNA13) subunits. Acts as a GTPase-activating protein (GAP) for GNA12 and GNA13, and as guanine nucleotide exchange factor (GEF) for RhoA GTPase. Activated G alpha 13/GNA13 stimulates the RhoGEF activity through interaction with the RGS-like domain. This GEF activity is inhibited by binding to activated GNA12. Mediates angiotensin-2-induced RhoA activation. Isoform 3 and isoform 4 do not homooligomerize and show an enhanced RhoGEF activity. {ECO:0000269 PubMed:20098430, ECO:0000269 PubMed:8910315}.
Molecular Weight:	102.8 kDa
UniProt:	Q61210
Pathways:	Neurotrophin Signaling Pathway , Regulation of G-Protein Coupled Receptor Protein Signaling , Thromboxane A2 Receptor Signaling

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from <i>Nicotiana tabacum</i> c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for

protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions: For Research Use only

Handling

Format: Liquid

Buffer: The buffer composition is at the discretion of the manufacturer.
Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol **Might differ depending on protein.**

Handling Advice: Avoid repeated freeze-thaw cycles.

Storage: -80 °C

Storage Comment: Store at -80°C.

Expiry Date: 12 months
