Datasheet for ABIN3135407 Kv1.4 Protein (AA 1-305) (His tag)

Image

Overview

Quantity:	1 mg		
Target:	Kv1.4 (KCNA4)		
Protein Characteristics:	AA 1-305		
Origin:	Mouse		
Source:	Insect Cells		
Protein Type:	Recombinant		
Purification tag / Conjugate:	This Kv1.4 protein is labelled with His tag.		
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a		
	special request, please contact us.		
Characteristics:	Made in Germany - from design to production - by highly experienced protein experts.		
	Mouse Kcna4 Protein (raised in Insect Cells) purified by multi-step, protein-specific process		
	to ensure crystallization grade.		
	State-of-the-art algorithm used for plasmid design (Gene synthesis).		

This protein is a made to order protein and will be made for the first time for your order. Our

Target:	Kv1.4 (KCNA4)
Alternative Name:	Kcna4 (KCNA4 Products)
Background:	Voltage-gated potassium channel that mediates transmembrane potassium transport in
	excitable membranes. Forms tetrameric potassium-selective channels through which

	potassium ions pass in accordance with their electrochemical gradient. The channel alternates		
	between opened and closed conformations in response to the voltage difference across the		
	membrane (PubMed:8020965). Can form functional homotetrameric channels and		
	heterotetrameric channels that contain variable proportions of KCNA1, KCNA2, KCNA4, KCNA5,		
	and possibly other family members as well, channel properties depend on the type of alpha		
	subunits that are part of the channel (By similarity). Channel properties are modulated by		
	cytoplasmic beta subunits that regulate the subcellular location of the alpha subunits and		
	promote rapid inactivation. In vivo, membranes probably contain a mixture of heteromeric		
	potassium channel complexes, making it difficult to assign currents observed in intact tissues		
	to any particular potassium channel family member. Homotetrameric KCNA4 forms a		
	potassium channel that opens in response to membrane depolarization, followed by rapid		
	spontaneous channel closure (PubMed:8020965). Likewise, a heterotetrameric channel formed		
	by KCNA1 and KCNA4 shows rapid inactivation (By similarity).

Molecular Weight:	35.8 kDa Including tag.		
UniProt:	Q61423		
Application Details			
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies		
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee		
	though.		
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the		
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher		
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible		
	options with you in detail to assure that you receive your protein of interest.		
Restrictions:	For Research Use only		
Handling			
Format:	Liquid		
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.		
Handling Advice:	Avoid repeated freeze-thaw cycles.		
Storage:	-80 °C
