

# Datasheet for ABIN3135505 SIN3B Protein (AA 1-1098) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SIN3B
Protein Characteristics:	AA 1-1098
Origin:	Mouse
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SIN3B protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

## Product Details

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

#### Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

• The concentration of our recombinant proteins is measured using the absorbance at 280nm.

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/4 | Product datasheet for ABIN3135505 | 10/08/2024 | Copyright antibodies-online. - The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

### **Target Details**

Target:	SIN3B
Alternative Name:	Sin3b (SIN3B Products)
Background:	Paired amphipathic helix protein Sin3b (Histone deacetylase complex subunit Sin3b)
	(Transcriptional corepressor Sin3b),FUNCTION: Acts as a transcriptional repressor. Interacts
	with MXI1 to repress MYC responsive genes and antagonize MYC oncogenic activities.
	Interacts with MAD-MAX heterodimers by binding to MAD. The heterodimer then represses
	transcription by tethering SIN3B to DNA. Also forms a complex with FOXK1 which represses
	transcription. With FOXK1, regulates cell cycle progression probably by repressing cell cycle
	inhibitor genes expression (PubMed:22476904). As part of the SIN3B complex represses
	transcription and counteracts the histone acetyltransferase activity of EP300 through the
	recognition H3K27ac marks by PHF12 and the activity of the histone deacetylase HDAC2.
	SIN3B complex is recruited downstream of the constitutively active genes transcriptional start
	sites through interaction with histones and mitigates histone acetylation and RNA polymerase II
	progression within transcribed regions contributing to the regulation of transcription (By
	similarity). {ECO:0000250 UniProtKB:075182, ECO:0000269 PubMed:10620510,
	EC0:0000269 PubMed:22476904, EC0:0000269 PubMed:7889570}.
Molecular Weight:	126.4 kDa
UniProt:	Q62141
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from

Expiry Date:

	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,
	please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.

Unlimited (if stored properly)
