SMARCD3 Protein (AA 2-483) (His tag)

Image

Go to Product page

Overview

Quantity:	1 mg
Target:	SMARCD3
Protein Characteristics:	AA 2-483
Origin:	Mouse
Source:	Escherichia coli (E. coli)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SMARCD3 protein is labelled with His tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

Product Details

Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- · Mouse Smarcd3 Protein (raised in E. Coli) purified by multi-step, protein-specific process to

ensure crystallization grade.

· State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in bacterial culture:

- In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Endotoxin has not been removed. Please contact us if you require endotoxin removal.

Grade:

Crystallography grade

Target Details

Target: SMARCD3

Alternative Name: Smarcd3 (SMARCD3 Products)

Target Details

Stimulates nuclear receptor mediated transcription (By similarity). Belongs to the nu progenitors-specific chromatin remodeling complex (npBAF complex) and the neur chromatin remodeling complex (nBAF complex). During neural development a switt stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neu cell cycle and become committed to their adult state. The transition from proliferati stem/progenitor cells to post-mitotic neurons requires a switch in subunit composi npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate int npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchar homologous alternative ACTL6B/BAF53B and DPF1/BAF45B or DPF3/BAF45C sub neuron-specific complexes (nBAF). The npBAF complex is essential for the self-renewal/proliferative capacity of the multipotent neural stem cells. The nBAF comp with CREST plays a role regulating the activity of genes essential for dendrite growt (ECO:0000250, ECO:0000269 PubMed:17640523). Molecular Weight: 55.8 kDa Including tag. UniProt: Q6P9Z1 Pathways: Regulation of Lipid Metabolism by PPARalpha Application Details Application Notes: In addition to the applications listed above we expect the protein to work for function as well. As the protein has not been tested for functional studies yet we cannot offer though. Comment: Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggestion.		
progenitors-specific chromatin remodeling complex (npBAF complex) and the neur chromatin remodeling complex (nBAF complex). During neural development a swits stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neucell cycle and become committed to their adult state. The transition from proliferative tem/progenitor cells to post-mitotic neurons requires a switch in subunit composi npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate int npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchar homologous alternative ACTL6B/BAF53B and DPF1/BAF45B or DPF3/BAF45C sub neuron-specific complexes (nBAF). The npBAF complex is essential for the self-renewal/proliferative capacity of the multipotent neural stem cells. The nBAF comp with CREST plays a role regulating the activity of genes essential for dendrite growt (ECO:0000250, ECO:0000269 PubMed:17640523). Molecular Weight: 55.8 kDa Including tag. UniProt: Q6P921 Pathways: Regulation of Lipid Metabolism by PPARalpha Application Details Application Details Application Notes: In addition to the applications listed above we expect the protein to work for function as well. As the protein has not been tested for functional studies yet we cannot offer though. Comment: Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may sugger molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss a options with you in detail to assure that you receive your protein of interest. For Research Use only Handling	round: P	ays a role in ATP dependent nucleosome remodeling by SMARCA4 containing complexes.
chromatin remodeling complex (nBAF complex). During neural development a swits stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neucell cycle and become committed to their adult state. The transition from proliferati stem/progenitor cells to post-mitotic neurons requires a switch in subunit composi npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate introparation in the part of the protein of the self-property of the multipotent neural stem cells. The nBAF complexes (nBAF). The npBAF complex is essential for the self-renewal/proliferative capacity of the multipotent neural stem cells. The nBAF complexity of genes essential for dendrite growth (ECO:0000250, ECO:0000269 PubMed:17640523). Molecular Weight: 55.8 kDa Including tag. UniProt: Q6P9Z1 Pathways: Regulation of Lipid Metabolism by PPARalpha Application Details Application Details In addition to the applications listed above we expect the protein to work for functional studies yet we cannot offer though. Comment: Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggestions with you in detail to assure that you receive your protein of interest. Restrictions: For Research Use only Handling	S	imulates nuclear receptor mediated transcription (By similarity). Belongs to the neural
stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as net- cell cycle and become committed to their adult state. The transition from proliferati stem/progenitor cells to post-mitotic neurons requires a switch in subunit composi npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate int npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchar homologous alternative ACTL6B/BAF53B and DPF17BAF45B or DPF3/BAF45C sub neuron-specific complexes (nBAF). The npBAF complex is essential for the self- renewal/proliferative capacity of the multipotent neural stem cells. The nBAF comp with CREST plays a role regulating the activity of genes essential for dendrite growt {ECO-0000250, ECO-0000269 PubMed:17640523}. Molecular Weight: 55.8 kDa Including tag. UniProt: Q6P9Z1 Pathways: Regulation of Lipid Metabolism by PPARalpha Application Details Application Notes: In addition to the applications listed above we expect the protein to work for functic as well. As the protein has not been tested for functional studies yet we cannot offe though. Comment: Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may sugge molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss a options with you in detail to assure that you receive your protein of interest. Restrictions: For Research Use only Handling	рі	ogenitors-specific chromatin remodeling complex (npBAF complex) and the neuron-specific
