

Datasheet for ABIN3135810 **GMIP Protein (AA 1-971) (Strep Tag)**

Go to Product page

Overview

Quantity:	250 μg
Target:	GMIP
Protein Characteristics:	AA 1-971
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This GMIP protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details	
Brand:	AliCE®
Sequence:	MDSAETELTP APEGRKRYSD IFQSLDNLEI SLGNVTFDPL AGDPVRREDL EPDKADTATV

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- · State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- · The protein's absorbance will be measured against its specific reference buffer.

System (AICE®). Purity: > 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC). Grade: custom-made Target Details Target: GMIP Alternative Name: Gmip (GMIP Products) Background: GEM-Interacting protein (GMIP),FUNCTION: Stimulates, in vitro and in vivo, the GTPase act of RhoA. (ECC:0000250). Molecular Weight: 107.5 kDa UniProt: Q6PGG2 Application Details Application Notes: In addition to the applications listed above we expect the protein to work for functional sture as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though. Comment: ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to prode even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production (amino acids, cofactors, etc.) are added to protein production acids.		We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.
Target Details Target: GMIP Alternative Name: Gmip (GMIP Products) Background: GEM-interacting protein (GMIP),FUNCTION: Stimulates, in vitro and in vivo, the GTPase act of RhoA. (ECO:0000250). Molecular Weight: 107.5 kDa UniProt: Q6PGG2 Application Details Application Notes: In addition to the applications listed above we expect the protein to work for functional studes as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though. Comment: ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to prode even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required to protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to processomething that functions like a cell, but without the constraints of a living system - all that needed is the DNA that codes for the desired protein!	Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Target: GMIP Alternative Name: Gmip (GMIP Products) Background: GEM-interacting protein (GMIP),FUNCTION: Stimulates, in vitro and in vivo, the GTPase act of RhoA. (ECO:0000250). Molecular Weight: 107.5 kDa UniProt: Q6PGG2 Application Details Application Notes: In addition to the applications listed above we expect the protein to work for functional stur as well. Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
