# Datasheet for ABIN3136136 PRKAG3 Protein (AA 1-489) (His tag)

Image

#### Overview

Quantity:	1 mg	
Target:	PRKAG3	
Protein Characteristics:	AA 1-489	
Origin:	Mouse	
Source:	Insect Cells	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This PRKAG3 protein is labelled with His tag.	
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)	

#### Product Details

Sequence:	MEPELEHTLP GTLTWSHSGG PESQEMDFLE QGENSWPSPA VATSSERTCA IRGVKASRWT
	RQEAVEEAEP PGLGEGAQSR PAAESTRQEA TFPKATPLAQ AVPLAEAETS PTGWDLLLPD
	CAASAGGSST GDLELTIEFP APEAWDCELE GLGKDRPRPG PSPQAPLLGL SWDDELQKPG
	AQVYMHFMQE HTCYDAMATS SKLVIFDTTL EIKKAFFAMV ANGVRAAPLW DSKKQSFVGM
	LTITDFILVL HRYYRSPLVQ IYEIEEHKIE TWREIYLQGC FKPLVSISPN DSLFEAVYAL IKNRIHRLPV
	LDPVSGTVLY ILTHKRLLKF LHIFGALLPR PSFLCRTIQD LGIGTFRDLA VVLETAPVLT
	ALDIFVDRRV SALPVVNESG QVVGLYSRFD VIHLAAQQTY NHLDMSVGEA LRQRTLCLEG
	VLSCQPHESL GEVIDRIARE QVHRLVLVDE TQHLLGVVSL SDILQALVLS PAGIDALSA
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Prkag3 Protein (raised in Insect Cells) purified by multi-step, protein-specific process</li> </ul>

to ensure crystallization grade.

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

	This protein is a made to order protein and will be made for the first time for your order. Our	
	experts in the lab will ensure that you receive a correctly folded protein.	
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom	
	made proteins from other companies is that there is no financial obligation in case the protein	
	cannot be expressed or purified.	
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything	
	(other companies might charge you for any performed steps in the expression process for	
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression	
	experiments or purification optimization).	
	When you order this made-to-order protein you will only pay upon receival of the correctly	
	folded protein. With no financial risk on your end you can rest assured that our experienced	
	protein experts will do everything to make sure that you receive the protein you ordered.	
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.	
	The protein's absorbance will be measured in several dilutions and is measured against its	
	specific reference buffer.	
	The concentration of the protein is calculated using its specific absorption coefficient. We use	
	the Expasy's protparam tool to determine the absorption coefficient of each protein.	
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:	
	1. In a first purification step, the protein is purified from the cleared cell lysate using three	
	different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate	
	fractions are analyzed by SDS-PAGE. 2. Protein containing fractions of the best purification are subjected to second purification step	
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.	
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.	
Sterility:	0.22 µm filtered	
Endotoxin Level:	Protein is endotoxin free.	
Grade:	Crystallography grade	
Target Details		
Target:	PRKAG3

## Target Details

Background:	AMP/ATP-binding subunit of AMP-activated protein kinase (AMPK), an energy sensor protein	
	kinase that plays a key role in regulating cellular energy metabolism. In response to reduction of	
	intracellular ATP levels, AMPK activates energy-producing pathways and inhibits energy-	
	consuming processes: inhibits protein, carbohydrate and lipid biosynthesis, as well as cell	
	growth and proliferation. AMPK acts via direct phosphorylation of metabolic enzymes, and by	
	longer-term effects via phosphorylation of transcription regulators. Also acts as a regulator of	
	cellular polarity by remodeling the actin cytoskeleton, probably by indirectly activating myosin.	
	Gamma non-catalytic subunit mediates binding to AMP, ADP and ATP, leading to activate or	
	inhibit AMPK: AMP-binding results in allosteric activation of alpha catalytic subunit (PRKAA1 or	
	PRKAA2) both by inducing phosphorylation and preventing dephosphorylation of catalytic	
	subunits. ADP also stimulates phosphorylation, without stimulating already phosphorylated	
	catalytic subunit. ATP promotes dephosphorylation of catalytic subunit, rendering the AMPK	
	enzyme inactive (By similarity). {ECO:0000250}.	
Molecular Weight:	54.8 kDa Including tag.	
UniProt:	Q8BGM7	
Pathways:	AMPK Signaling, Cellular Glucan Metabolic Process, Warburg Effect	

## Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

### Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
