## Datasheet for ABIN3136141 FLRT3 Protein (AA 29-528) (His tag)

Image

## Overview

| Quantity:                     | 1 mg   |
|-------------------------------|--|
| Target:                       | FLRT3  |
| Protein Characteristics:      | AA 29-528  |
| Origin:                       | Mouse  |
| Source:                       | Insect Cells   |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This FLRT3 protein is labelled with His tag.                         |
| Application:                  | SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys) |

## Product Details

| Product Details  |   |
|------------------|---|
| Characteristics: | <ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Flrt3 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>                                      |
|                  | This protein is a made to order protein and will be made for the first time for your order. Our   |
|                  | experts in the lab will ensure that you receive a correctly folded protein.   |
|                  | The big advantage of ordering our made-to-order proteins in comparison to ordering custom   |
|                  | made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.  |
|                  | In the unlikely event that the protein cannot be expressed or purified we do not charge anything  |
|                  | (other companies might charge you for any performed steps in the expression process for   |
|                  | custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression  |
|                  | experiments or purification optimization).  |
|                  | When you order this made-to-order protein you will only pay upon receival of the correctly  |
|                  | folded protein. With no financial risk on your end you can rest assured that our experienced  |
|                  | protein experts will do everything to make sure that you receive the protein you ordered.   |
|                  | The concentration of our recombinant proteins is measured using the absorbance at 280nm.  |
|                  | The protein's absorbance will be measured in several dilutions and is measured against its  |
|                  | specific reference buffer.  |
|                  | The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.   |
| Purification:    | Two step purification of proteins expressed in baculovirus infected SF9 insect cells:   |
|                  | <ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three<br/>different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate<br/>fractions are analyzed by SDS-PAGE.</li> <li>Destring containing for store of the bast purification are publicated to accord purification atom</li> </ol> |
|                  | <ol> <li>Protein containing fractions of the best purification are subjected to second purification step<br/>through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and<br/>Western blot.</li> </ol>  |
| Purity:          | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.  |
| Sterility:       | 0.22 µm filtered  |
| Endotoxin Level: | Protein is endotoxin free.  |
| Grade:           | Crystallography grade   |

| Target:             | FLRT3   |
|---------------------|---|
| Alternative Name:   | FIrt3 (FLRT3 Products)  |
| Background:         | Functions in cell-cell adhesion, cell migration and axon guidance, exerting an attractive or      |
|                     | repulsive role depending on its interaction partners (PubMed:19056886, PubMed:25374360).          |
|                     | Plays a role in the spatial organization of brain neurons (PubMed:25374360). Plays a role in      |
|                     | vascular development in the retina (PubMed:25374360). Plays a role in cell-cell adhesion via its  |
|                     | interaction with ADGRL3 and probably also other latrophilins that are expressed at the surface    |
|                     | of adjacent cells (PubMed:22405201, PubMed:25374360). Interaction with the intracellular          |
|                     | domain of ROBO1 mediates axon attraction towards cells expressing NTN1                            |
|                     | (PubMed:24560577). Mediates axon growth cone collapse and plays a repulsive role in neuron        |
|                     | guidance via its interaction with UNC5B, and possibly also other UNC-5 family members             |
|                     | (PubMed:21673655, PubMed:25374360). Promotes neurite outgrowth (in vitro) (By similarity).        |
|                     | Mediates cell-cell contacts that promote an increase both in neurite number and in neurite        |
|                     | length (By similarity). Plays a role in the regulation of the density of glutamaergic synapses    |
|                     | (PubMed:22405201). Plays a role in fibroblast growth factor-mediated signaling cascades           |
|                     | (PubMed:16872596). Required for normal morphogenesis during embryonic development, but            |
|                     | not for normal embryonic patterning (PubMed:19056886). Required for normal ventral closure,       |
|                     | headfold fusion and definitive endoderm migration during embryonic development                    |
|                     | (PubMed:18448090). Required for the formation of a normal basement membrane and the               |
|                     | maintenance of a normal anterior visceral endoderm during embryonic development                   |
|                     | (PubMed:19056886). {ECO:0000250 UniProtKB:B1H234, ECO:0000269 PubMed:16872596,                    |
|                     | ECO:0000269 PubMed:18448090, ECO:0000269 PubMed:19056886,   |
|                     | ECO:0000269 PubMed:21673655, ECO:0000269 PubMed:22405201,   |
|                     | ECO:0000269 PubMed:24560577, ECO:0000269 PubMed:25374360}.  |
| Molecular Weight:   | 57.4 kDa Including tag.   |
| UniProt:            | Q8BGT1  |
| Application Details |   |
| Application Notes:  | In addition to the applications listed above we expect the protein to work for functional studies |
|                     | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
|                     | though.   |
| Comment:            | Protein has not been tested for activity yet. In cases in which it is highly likely that the      |
|                     | recombinant protein with the default tag will be insoluble our protein lab may suggest a higher   |

| Application Details |  |
|---------------------|--|
|                     | molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest. |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Liquid   |
| Buffer:             | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.   |
| Handling Advice:    | Avoid repeated freeze-thaw cycles.   |
| Storage:            | -80 °C   |
| Storage Comment:    | Store at -80°C.  |
| Expiry Date:        | Unlimited (if stored properly)   |
