antibodies

Datasheet for ABIN3136142 FLRT3 Protein (AA 29-649) (rho-1D4 tag)

Overview

Quantity:	1 mg
Target:	FLRT3
Protein Characteristics:	AA 29-649
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This FLRT3 protein is labelled with rho-1D4 tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys)

Product Details

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Flrt3 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect
	cells:
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.
	2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
	3. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin-free.

Product Details

Grade:

Crystallography grade

Target Details

Target:	FLRT3
Alternative Name:	FIrt3 (FLRT3 Products)
Background:	Functions in cell-cell adhesion, cell migration and axon guidance, exerting an attractive or
	repulsive role depending on its interaction partners (PubMed:19056886, PubMed:25374360).
	Plays a role in the spatial organization of brain neurons (PubMed:25374360). Plays a role in
	vascular development in the retina (PubMed:25374360). Plays a role in cell-cell adhesion via its
	interaction with ADGRL3 and probably also other latrophilins that are expressed at the surface
	of adjacent cells (PubMed:22405201, PubMed:25374360). Interaction with the intracellular
	domain of ROBO1 mediates axon attraction towards cells expressing NTN1
	(PubMed:24560577). Mediates axon growth cone collapse and plays a repulsive role in neuror
	guidance via its interaction with UNC5B, and possibly also other UNC-5 family members
	(PubMed:21673655, PubMed:25374360). Promotes neurite outgrowth (in vitro) (By similarity).
	Mediates cell-cell contacts that promote an increase both in neurite number and in neurite
	length (By similarity). Plays a role in the regulation of the density of glutamaergic synapses
	(PubMed:22405201). Plays a role in fibroblast growth factor-mediated signaling cascades
	(PubMed:16872596). Required for normal morphogenesis during embryonic development, but
	not for normal embryonic patterning (PubMed:19056886). Required for normal ventral closure
	headfold fusion and definitive endoderm migration during embryonic development
	(PubMed:18448090). Required for the formation of a normal basement membrane and the
	maintenance of a normal anterior visceral endoderm during embryonic development
	(PubMed:19056886). {ECO:0000250 UniProtKB:B1H234, ECO:0000269 PubMed:16872596,

Application Details

	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
