antibodies

# Datasheet for ABIN3136222 FLRT2 Protein (AA 36-660) (rho-1D4 tag)

Overview

Quantity:	1 mg
Target:	FLRT2
Protein Characteristics:	AA 36-660
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This FLRT2 protein is labelled with rho-1D4 tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys)

#### Product Details

	YTDCHIPNNM RYCNSSVPDL EHCHT Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

### Product Details

	special request, please contact us.
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Mouse Flrt2 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect
	cells:
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with
	<ul><li>different detergents (detergent screen). Samples are analyzed by Western blot.</li><li>2. The best performing detergent is used for solubilization and the proteins are purified via their</li></ul>
	rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate
	fractions are analyzed by Western blot.
	3. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
	Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin-free.

#### Product Details

Grade:

Crystallography grade

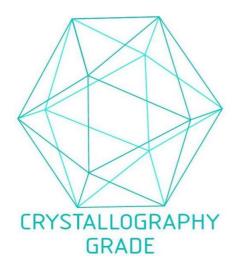

## Target Details

Target:	FLRT2
Alternative Name:	FIrt2 (FLRT2 Products)
Background:	Functions in cell-cell adhesion, cell migration and axon guidance. Mediates cell-cell adhesion
	via its interactions with ADGRL3 and probably also other latrophilins that are expressed at the
	surface of adjacent cells (PubMed:21350012, PubMed:25728924 PubMed:25374360). May play
	a role in the migration of cortical neurons during brain development via its interaction with
	UNC5D (PubMed:21673655). Mediates axon growth cone collapse and plays a repulsive role in
	neuron guidance via its interaction with UNC5D, and possibly also other UNC-5 family members
	(PubMed:21673655, PubMed:25728924). Plays a role in fibroblast growth factor-mediated
	signaling cascades (PubMed:16872596). Required for normal organization of the cardiac
	basement membrane during embryogenesis, and for normal embryonic epicardium and heart
	morphogenesis (PubMed:21350012). {ECO:0000269 PubMed:16872596,
	EC0:0000269 PubMed:21350012, EC0:0000269 PubMed:21673655,
	EC0:0000269 PubMed:25374360, EC0:0000269 PubMed:25728924}.
Molecular Weight:	71.2 kDa Including tag.
UniProt:	Q8BLU0
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid

Handling		
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	
Storage Comment:	Store at -80°C.	
Expiry Date:	Unlimited (if stored properly)
