antibodies

# Datasheet for ABIN3136306 NKRF Protein (AA 1-690) (Strep Tag)

Overview

| Quantity:                     | 1 mg  |
|-------------------------------|---|
| Target:                       | NKRF  |
| Protein Characteristics:      | AA 1-690                                      |
| Origin:                       | Mouse   |
| Source:                       | Tobacco (Nicotiana tabacum)                   |
| Protein Type:                 | Recombinant                                   |
| Purification tag / Conjugate: | This NKRF protein is labelled with Strep Tag. |
| Application:                  | Western Blotting (WB), SDS-PAGE (SDS), ELISA  |

All rights reserved. Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

### Characteristics: Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

|                  | <ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using StrepTag<br/>capture material. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Protein containing fractions of the best purification are subjected to second purification step<br/>through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and<br/>Western blot.</li> </ol> |
|------------------|--|
| Purity:          | $\geq$ 80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.   |
| Endotoxin Level: | Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)  |

## Target Details

| Target:             | NKRF   |
|---------------------|--|
| Alternative Name:   | Nkrf (NKRF Products)   |
| Background:         | NF-kappa-B-repressing factor (NFkB-repressing factor) (Transcription factor NRF),FUNCTION:<br>Enhances the ATPase activity of DHX15 by acting like a brace that tethers mobile sections of<br>DHX15 together, stabilizing a functional conformation with high RNA affinity of DHX15. Involved<br>in the constitutive silencing of the interferon beta promoter, independently of the virus-induced<br>signals, and in the inhibition of the basal and cytokine-induced iNOS promoter activity. Also<br>involved in the regulation of IL-8 transcription. May also act as a DNA-binding transcription<br>regulator: interacts with a specific negative regulatory element (NRE) 5'-AATTCCTCTGA-3' to<br>mediate transcriptional repression of certain NK-kappa-B responsive genes.<br>{ECO:0000250 UniProtKB:015226}. |
| Molecular Weight:   | 77.7 kDa   |
| UniProt:            | Q8BY02   |
| Application Details |  |
| Application Notes:  | In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.   |
