Datasheet for ABIN3136491 PAK2 Protein (AA 2-524) (His tag)

Image

Overview

Quantity:	1 mg
Target:	PAK2
Protein Characteristics:	AA 2-524
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This PAK2 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:	SDNGELEDKP PAPPVRMSST IFSTGGKDPL SANHSLKPLP SVPEEKKPRN KIISIFSGTE
	KGSKKKEKER PEISPPSDFE HTIHVGFDAV TGEFTGMPEQ WARLLQTSNI TKLEQKKNPQ

,	uction - by highly experienced protein experts. Ils) purified by multi-step, protein-specific process to nid design (Gene synthesis).
This protein is a made to order protein and	will be made for the first time for your order. Our
experts in the lab will ensure that you receiv	ve a correctly folded protein.
The big advantage of ordering our made-to	o-order proteins in comparison to ordering custom
made proteins from other companies is the	at there is no financial obligation in case the protein
cannot be expressed or purified.	
In the unlikely event that the protein cannot	t be expressed or purified we do not charge anything
(other companies might charge you for any	y performed steps in the expression process for
custom-made proteins, e.g. fees might app	ly for the expression plasmid, the first expression
experiments or purification optimization).	
When you order this made-to-order protein	you will only pay upon receival of the correctly
folded protein. With no financial risk on you	r end you can rest assured that our experienced
protein experts will do everything to make s	sure that you receive the protein you ordered.
The concentration of our recombinant prot	eins is measured using the absorbance at 280nm.
The protein's absorbance will be measured specific reference buffer.	l in several dilutions and is measured against its
The concentration of the protein is calculat	ed using its specific absorption coefficient. We use
the Expasy's protparam tool to determine t	he absorption coefficient of each protein.
Purification: Two step purification of proteins expressed	d in baculovirus infected SF9 insect cells:
	ourified from the cleared cell lysate using three yield, EDTA resistant, or DTT resistant. Eluate
	ourification are subjected to second purification step Eluate fractions are analyzed by SDS-PAGE and
Purity: >95 % as determined by SDS PAGE, Size Ex	clusion Chromatography and Western Blot.
Sterility: 0.22 µm filtered	
Endotoxin Level: Protein is endotoxin free.	
Grade: Crystallography grade

Target Details	
Target:	PAK2
Alternative Name:	Pak2 (PAK2 Products)
Background:	Serine/threonine protein kinase that plays a role in a variety of different signaling pathways including cytoskeleton regulation, cell motility, cell cycle progression, apoptosis or proliferation. Acts as downstream effector of the small GTPases CDC42 and RAC1. Activation by the binding of active CDC42 and RAC1 results in a conformational change and a subsequent autophosphorylation on several serine and/or threonine residues. Full-length PAK2 stimulates cell survival and cell growth. Phosphorylates MAPK4 and MAPK6 and activates the downstream target MAPKAPK5, a regulator of F-actin polymerization and cell migration. Phosphorylates JUN and plays an important role in EGF-induced cell proliferation. Phosphorylates many other substrates including histone H4 to promote assembly of H3.3 and H4 into nucleosomes, BAD, ribosomal protein S6, or MBP. Additionally, associates with ARHGEF7 and GIT1 to perform kinase-independent functions such as spindle orientation control during mitosis. On the other hand, apoptotic stimuli such as DNA damage lead to caspase-mediated cleavage of PAK2, generating PAK-2p34, an active p34 fragment that translocates to the nucleus and promotes cellular apoptosis involving the JNK signaling pathway. Caspase-activated PAK2 phosphorylates MKNK1 and reduces cellular translation (By similarity). {EC0:0000250, EC0:0000269 PubMed:11278362}.
Molecular Weight:	58.8 kDa Including tag.
UniProt: Pathways:	Q8CIN4 MAPK Signaling, RTK Signaling, TCR Signaling, Fc-epsilon Receptor Signaling Pathway, Regulation of Lipid Metabolism by PPARalpha
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
