

# Datasheet for ABIN3136529 CNOT3 Protein (AA 1-751) (Strep Tag)

Overview

Quantity:	250 µg
Target:	CNOT3
Protein Characteristics:	AA 1-751
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This CNOT3 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

### Product Details

Brand:	AliCE®
Sequence:	MADKRKLQGE IDRCLKKVSE GVEQFEDIWQ KLHNAANANQ KEKYEADLKK EIKKLQRLRD

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

#### Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).

### Product Details

 Purity:
 > 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

 Grade:
 custom-made

## Target Details

Target:	CNOT3
Alternative Name:	Cnot3 (CNOT3 Products)
Background:	CCR4-NOT transcription complex subunit 3 (CCR4-associated factor 3),FUNCTION: Component
	of the CCR4-NOT complex which is one of the major cellular mRNA deadenylases and is linked
	to various cellular processes including bulk mRNA degradation, miRNA-mediated repression,
	translational repression during translational initiation and general transcription regulation.
	Additional complex functions may be a consequence of its influence on mRNA expression. May
	be involved in metabolic regulation, may be involved in recruitment of the CCR4-NOT complex
	to deadenylation target mRNAs involved in energy metabolism. Involved in mitotic progression
	and regulation of the spindle assembly checkpoint by regulating the stability of MAD1L1 mRNA.
	Can repress transcription and may link the CCR4-NOT complex to transcriptional regulation, the
	repressive function may involve histone deacetylases. Involved in the maintenance of
	embryonic stem (ES) cell identity, prevents their differentiation towards extraembryonic
	trophectoderm lineages. {ECO:0000269 PubMed:21897366, ECO:0000269 PubMed:22367759}.
Molecular Weight:	81.9 kDa
UniProt:	Q8K0V4
Pathways:	Stem Cell Maintenance
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
