Datasheet for ABIN3137293

TRPM5 Protein (AA 1-1158) (Strep Tag)

Go to Product page

Overview

Quantity:	250 µg
Target:	TRPM5
Protein Characteristics:	AA 1-1158
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This TRPM5 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Brand:	AliCE®
Sequence:	MQTTQSSCPG SPPDTEDGWE PILCRGEINF GGSGKKRGKF VKVPSSVAPS VLFELLLTEW HLPAPNLVVS LVGEERPLAM KSWLRDVLRK GLVKAAQSTG AWILTSALHV GLARHVGQAV RDHSLASTST KIRVVAIGMA SLDRILHRQL LDGVHQKEDT PIHYPADEGN IQGPLCPLDS NLSHFILVES GALGSGNDGL TELQLSLEKH ISQQRTGYGG TSCIQIPVLC LLVNGDPNTL ERISRAVEQA APWLILAGSG GIADVLAALV SQPHLLVPQV AEKQFREKFP SECFSWEAIV HWTELLQNIA AHPHLLTVYD FEQEGSEDLD TVILKALVKA CKSHSQEAQD YLDELKLAVA WDRVDIAKSE IFNGDVEWKS CDLEEVMTDA LVSNKPDFVR LFVDSGADMA EFLTYGRLQQ LYHSVSPKSL LFELLQRKHE EGRLTLAGLG AQQARELPIG LPAFSLHEVS RVLKDFLHDA CRGFYQDGRR MEERGPPKRP AGQKWLPDLS RKSEDPWRDL FLWAVLQNRY EMATYFWAMG REGVAAALAA CKIIKEMSHL EKEAEVARTM REAKYEQLAL DLFSECYGNS EDRAFALLVR RNHSWSRTTC LHLATEADAK AFFAHDGVQA FLTKIWWGDM ATGTPILRLL GAFTCPALIY

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany - from design to production - by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.
The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Product Details

	Concentration: • The concentration of our recombinant proteins is measured using the absorbance at 280nm. • The protein's absorbance will be measured against its specific reference buffer. • We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.
Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	TRPM5
Alternative Name:	Trpm5 (TRPM5 Products)
Background:	Transient receptor potential cation channel subfamily M member 5 (Long transient receptor potential channel 5) (LTrpC-5) (LTrpC5) (MLSN1- and TRP-related gene 1 protein),FUNCTION: Voltage-modulated Ca(2+)-activated, monovalent cation channel (VCAM) that mediates a transient membrane depolarization and plays a central role in taste transduction. Monovalent-specific, non-selective cation channel that mediates the transport of Na(+), K(+) and Cs(+) ions equally well. Activated directly by increases in intracellular Ca(2+), but is impermeable to it. Gating is voltage-dependent and displays rapid activation and deactivation kinetics upon channel stimulation even during sustained elevations in Ca(2+). Also activated by a fast intracellular Ca(2+) increase in response to inositol 1,4,5-triphosphate-producing receptor agonists. The channel is blocked by extracellular acidification. External acidification has 2 effects, a fast reversible block of the current and a slower irreversible enhancement of current inactivation. Is a highly temperature-sensitive, heat activated channel showing a steep increase of inward currents at temperatures between 15 and 35 degrees Celsius. Heat activation is due to a shift of the voltage-dependent activation curve to negative potentials. Activated by arachidonic acid in vitro. May be involved in perception of bitter, sweet and umami tastes. May also be involved in sensing semiochemicals. {ECO:0000269|PubMed:12842017, ECO:0000269|PubMed:14657398, ECO:0000269|PubMed:15731110, ECO:0000269|PubMed:16355226, ECO:0000269|PubMed:16436689, ECO:0000269|PubMed:16935556, ECO:0000269|PubMed:17267604, ECO:0000269|PubMed:17522321}.

Target Details

Molecular Weight:	130.8 kDa
UniProt:	Q9JJH7

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol **Might differ depending on protein.**
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
