antibodies

Datasheet for ABIN3137421 AMFR Protein (AA 1-643) (rho-1D4 tag)

Overview

Image

Quantity:	1 mg
Target:	AMFR
Protein Characteristics:	AA 1-643
Origin:	Mouse
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This AMFR protein is labelled with rho-1D4 tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

Product Details

	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Mouse Amfr Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect
	 cells: 1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot. 2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin-free.

Product Details

Grade:

Crystallography grade

Target Details

Target:	AMFR
Alternative Name:	Amfr (AMFR Products)
Background:	E3 ubiquitin-protein ligase that mediates the polyubiquitination of a number of proteins such as
	CD3D, CYP3A4, CFTR and APOB for proteasomal degradation. Component of a VCP/p97-
	AMFR/gp78 complex that participates in the final step of endoplasmic reticulum-associated
	degradation (ERAD). The VCP/p97-AMFR/gp78 complex is involved in the sterol-accelerated
	ERAD degradation of HMGCR through binding to the HMGCR-INSIG complex at the ER
	membrane and initiating ubiquitination of HMGCR. The ubiquitinated HMGCR is then released
	from the ER by the complex into the cytosol for subsequent destruction. Also acts as a scaffold
	protein to assemble a complex that couples ubiquitination, retranslocation and deglycosylation
	Mediates tumor invasion and metastasis (By similarity). {ECO:0000250,
	ECO:0000269 PubMed:16987818, ECO:0000269 PubMed:18216283}.
Molecular Weight:	74.3 kDa Including tag.
UniProt:	Q9R049
Pathways:	ER-Nucleus Signaling
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the
	recombinant protein with the default tag will be insoluble our protein lab may suggest a higher
	molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible
	options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Restrictions: Handling	For Research Use only
