

## Datasheet for ABIN336539

## Goat anti-Human IgA Antibody (Alkaline Phosphatase (AP))

Go to Product page

| Overview            |   |
|---------------------|---|
| Quantity:           | 1 mg  |
| Target:             | IgA   |
| Reactivity:         | Human   |
| Host:               | Goat  |
| Clonality:          | Polyclonal  |
| Conjugate:          | Alkaline Phosphatase (AP)   |
| Application:        | ELISA, Immunohistochemistry (IHC), Western Blotting (WB), Immunocytochemistry (ICC), Immunoassay (IA) |
| Product Details     |   |
| Immunogen:          | Goat serum was obtained from animals of US origin and under the care of a registered veterinarian.    |
| Purification:       | Affinity purified using solid phase Human IgA   |
| Target Details      |   |
| Target:             | IgA   |
| Abstract:           | IgA Products  |
| Target Type:        | Antibody  |
| Application Details |   |
| Application Notes:  | This conjugate is suitable for all immunoassay applications.  |

## **Application Details**

|                    | The optimal working dilution should be determined by the investigator. Suggested starting         |
|--------------------|---|
|                    | dilution: 1:500-1:2,000 for ELISA/Western blot 1:20. 1:2,000 for Immunohistochemistry 1:50.       |
|                    | 1:5,000 for Immunocytochemistry   |
| Comment:           | ALP: Enzyme derived from calf intestine (U.S. origin), Catalyzes the hydrolysis of phosphate      |
|                    | groups from a substrate, which produces a colored reaction product or a release of light, The     |
|                    | most common substrate for ALP is pNPP, which produces a soluble product, Unaffected by            |
|                    | biological components in the ELISA assay, and produces consistent results, The reaction rate o    |
|                    | ALP is linear, so its detection sensitivity can be increased by increasing the length of the      |
|                    | reaction time. Detection OD of 405 nm   |
| Restrictions:      | For Research Use only   |
| Handling           |   |
| Buffer:            | 30 mM Triethanolamine, pH 7.2, 5 mM Magnesium Chloride, 0.1 mM Zinc Chloride, 1 % (w/v)           |
|                    | BSA, Protease/IgG free. Preservative: 0.05 % (w/v) Sodium Azide                                   |
| Preservative:      | Sodium azide  |
| Precaution of Use: | WARNING: Reagents contain sodium azide. Sodium azide is very toxic if ingested or inhaled.        |
|                    | Avoid contact with skin, eyes, or clothing. Wear eye or face protection when handling. If skin or |
|                    | eye contact occurs, wash with copious amounts of water. If ingested or inhaled, contact a         |
|                    | physician immediately. Sodium azide yields toxic hydrazoic acid under acidic conditions. Dilute   |
|                    | azide-containing compounds in running water before discarding to avoid accumulation of            |
|                    | potentially explosive deposits in lead or copper plumbing.  |
| Handling Advice:   | Do not freeze! Freezing alkaline phosphatase conjugates will result in a substantial loss of      |
|                    | enzymatic activity.   |
|                    | Do not add Sodium azide.  |
|                    | Dilute only prior to immediate use  |
|                    | Each reagent is stable for the period shown on the bottle label if stored as directed.            |
|                    |   |
