Target Details

Target:	PRMT8
Alternative Name:	PRMT8 / HRMT1L3 (PRMT8 Products)

Target Details

Background: Protein arginine methylation plays a role in signal transduction, RNA processing, transcriptional regulation, and DNA repair. PRMT8, a protein arginine N-methyltransferase most closely related to PRMT1, methylates the guanidino nitrogens of arginyl residues in some proteins. This protein associates with the plasma membrane following myristoylation and exhibits a brain-specific expression pattern, making it unique within this family of enzymes. **Synonyms:** HRMT1L4, Heterogeneous nuclear ribonucleoprotein methyltransferase-like protein 4, Protein arginine N-methyltransferase 8

Gene ID: 56341, 9606
