# Target Details

Background:	CDH10 is a type II classical cadherin from the cadherin superfamily, integral membrane
	proteins that mediate calcium-dependent cell-cell adhesion. Mature cadherin proteins are
	composed of a large N-terminal extracellular domain, a single membrane-spanning domain,
	and a small, highly conserved C-terminal cytoplasmic domain. The extracellular domain
	consists of 5 subdomains, each containing a cadherin motif, and appears to determine the
	specificity of the protein's homophilic cell adhesion activity. Type II (atypical) cadherins are
	defined based on their lack of a HAV cell adhesion recognition sequence specific to type I
	cadherins. This particular cadherin is predominantly expressed in brain and is putatively
	involved in synaptic adhesions, axon outgrowth and guidance.Synonyms: CDH10, T2-Cadherin
