Background:	STK38L contains 12 protein kinase catalytic subdomains and a potential bipartite nuclear localization signal. Northern blot analysis revealed expression of a 3.9-kb transcript in all tissues tested, with the possible exception of adult brain. Highest expression was in peripheral blood leukocytes. Immunoblot and immunofluorescence microscopy demonstrated predominantly nuclear expression of a 55-kD protein. Synonyms: KIAA0965, NDR2, Nuclear Dbf2-related kinase 2, Serine/threonine-protein kinase 38-like	
Gene ID:	23012, 9606	
UniProt:	Q9Y2H1	
Application Details		
Application Notes:	ELISA: 1/1,000. Western Blot: 1/250 - 1/500.  Other applications not tested.  Optimal dilutions are dependent on conditions and should be determined by the user.
