Datasheet for ABIN361468 anti-EPH Receptor B2 antibody (pTyr331)

Overview

Quantity:	100 µL
Target:	EPH Receptor B2 (EPHB2)
Binding Specificity:	pTyr331
Reactivity:	Chicken
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This EPH Receptor B2 antibody is un-conjugated
Application:	Western Blotting (WB)

Product Details

Immunogen:	Synthetic phospho-peptide corresponding to amino acid residues surrounding Tyr331 conjugated to KLH
Specificity:	Specific for the ~46k EphrinB protein phosphorylated at Tyr331. Immunolabeling is blocked by (-phosphatase treatment.
Cross-Reactivity:	Mouse (Murine), Rat (Rattus)
Predicted Reactivity:	bovine, chicken, human, mouse, Xenopus, zebra fish
Purification:	Antigen Affinity Purified from Pooled Serum

Target Details

Target:

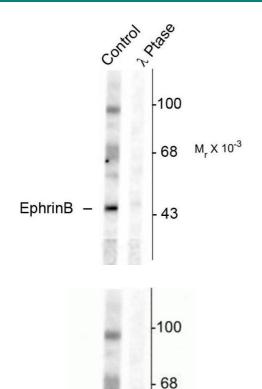

EPH Receptor B2 (EPHB2)

Alternative Name:	EPHB2 (EPHB2 Products)
Background:	EphrinB proteins are thought to play key roles in cellular functions as diverse as neuronal
	migration and blood vessel development (Flanagan and Vanderhaeghen, 1998, Dufour et al.,
	2003, Oike et al., 2002). EphrinB molecules expressed at the membrane surface bind to the
	EphB family receptors on target cells during cell-to cell contact. This interaction leads to cell
	signaling in the target cell but also generates a reverse signal in the cell expressing EphrinB or
	its surface. This reverse signaling event is thought to be critical for vessel maturation and
	neuronal development. Importantly, tyrosine phosphorylation of EphrinB is thought to be a
	critical component of this reverse signaling event (Palmer et al., 2002). Recent work
	demonstrated that Tyr331 of EphrinB was phosphorylated in HEK293 cells after stimulation by
	the soluble EphB2 receptor tyrosine kinase (Kalo et al., 2001). Anti-Phospho-Tyr331 EphrinB
	Western blot of rat testes lysate showing specific immunolabeling of the \sim 46k EphrinB
	phosphorylated at Tyr331 (Control). The phosphospecificity of this labeling is shown in the
	second lane (lambda-phosphatase: (-Ptase). The blot is identical to the control except that it
	was incubated in (-Ptase (1200 units for 30 min) before being exposed to the Anti-Tyr331
	EphrinB. The immunolabeling is completely eliminated by treatment with (-Ptase.
Molecular Weight:	'46 kDa
Gene ID:	396513
UniProt:	P28693
Pathways:	RTK Signaling, Regulation of long-term Neuronal Synaptic Plasticity, S100 Proteins
Application Details	
Application Notes:	Recommended Dilution: WB: 1:1000 Quality Control: Western blots performed on each lot.
Restrictions:	For Research Use only
Handling	
Formati	Liquid

Format:	Liquid
Buffer:	100 μL in 10 mM HEPES ($$ pH 7.5), 150 mM NaCl, 100 μg per ml BSA and 50 % glycerol.
Storage:	-20 °C

λptase

Western Blotting

Image 1. Western blots of rat testes lysate showing specific immunolabeling of the ~46k EphrinB phosphorylated at Tyr331 (Control). The phosphospecificity of this labeling is shown in the second lane (lambda-phosphatase: (-Ptase). The blot is identical to the control except that it was incubated in (-Ptase (1200 units for 30 min) before being exposed to the Anti-Tyr331 EphrinB. The immunolabeling is completely eliminated by treatment with (-Ptase.

Western Blotting

Image 2. Western blot of rat testes lysate showing specific immunolabeling of the ~46 kDa EphrinB phosphorylated at Tyr331 in the first lane (-). Phosphospecificity is shown in the second lane (+) where immunolabeling is completely eliminated by lysate treatment with lambda phosphatase (λ -Ptase, 800 units/1mg protein for 30 min).
