Datasheet for ABIN361795 anti-FKBP5 antibody

2 Images

1 Publication

Overview

Quantity:	100 µg
Target:	FKBP5
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This FKBP5 antibody is un-conjugated
Application:	Western Blotting (WB), Immunofluorescence (IF), Immunocytochemistry (ICC)

Product Details

Immunogen:	Synthetic peptide corresponding to the residues of human FKBP51	
Clone:	Hi51B	
Isotype:	lgG1	
Specificity:	Detects ~51 kDa.	
Cross-Reactivity:	Dog, Hamster, Human, Mouse, Rabbit, Rat	
Purification:	Protein G Purified	

Target Details

Target:	FKBP5
Alternative Name:	FKBP51 (FKBP5 Products)
Background:	HSP90 is crucial to cellular signaling by its regulation of the folding, activity, and stability of a

All rights reserved. wide range of client proteins. These client protein complexes may also contain one or more cochaperones (1). One class of HSP90-binding cochaperone is composed of proteins with a characteristic tetratricopeptide repeat (TPR) domain that forms an HSP90 binding site. Among the TPR cochaperones of HSP90 are Hop/Sti1, protein phosphatase PP5, and members of both the FK506- and cyclosporin A-binding families of immunophilins (2). FK506-binding protein 51 (FKBP51) and FKBP52 are large molecular weight immunophilins that are part of the mature glucocorticoid receptor (GR) heterocomplex (3). The N terminal domain of each protein binds FK506 and has peptidyl-prolyl isomerase (PPIase) activity that converts prolyl peptide bonds within target proteins from cis- to trans- proline. The C-terminal domains contain the TPR repeats involved in protein-protein interactions with the HSP90 (4). Although FKBP52 and FKBP51 share ~75 % sequence similarity, they affect hormone binding by glucocorticoid receptor in opposing manners and have different HSP90-binding characteristics (3). FK506 binding protein 51 kDa (FKBP51 or otherwise referred to as FKBP54) has been identified as a progestininducible gene. This protein is predominantly expressed in murine T cells but in humans, it is abundantly expressed in numerous tissues at levels many times higher than FKBP12. The FKBP51 gene is known to be induced by glucocorticoids (5).

Gene ID:	2289
NCBI Accession:	NP_001139247
UniProt:	Q13451

Application Details

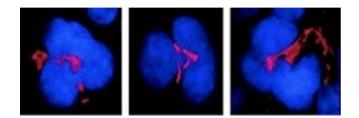

Application Notes:	 WB (1:2000) ICC/IF (1:1000) optimal dilutions for assays should be determined by the user.
Comment:	A 1:2000 dilution was sufficient for detection of FKBP51 in \sim 50 μ g total protein using WB analysis.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 mg/mL
Buffer:	PBS, 50 % glycerol, 0.09 % sodium azide, Storage buffer may change when conjugated
