# Datasheet for ABIN366628 NAMPT ELISA Kit

1 Image

7 Publications

#### Overview

Quantity:	96 tests
Target:	NAMPT
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.625-40 ng/mL
Minimum Detection Limit:	0.625 ng/mL
Application:	ELISA

### Product Details

Purpose:	For the quantitative determination of human visfatin concentrations in serum, plasma, urine, tissue homogenates.
Sample Type:	Serum, Plasma, Urine, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of human visfatin.
Cross-Reactivity (Details):	Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between the target antigen and all analogues for other species. Therefore, cross reaction may still exist.
Sensitivity:	0.156 ng/mL
Components:	Assay plate (12 × 8 coated Microwells)

- Standard (freeze dried)
- Biotin-antibody (100 × concentrate)
- HRP-avidin (100 × concentrate)
- Biotin-antibody Diluent
- HRP-avidin Diluent
- Sample Diluent
- Wash Buffer (25 × concentrate)
- TMB Substrate
- Stop Solution
- Adhesive Strip (for 96 wells)
- Instruction manual

## Target Details

Target:	NAMPT
Alternative Name:	visfatin (NAMPT Products)
Background:	Synonyms: 1110035014Rik, DKFZp666B131, MGC117256, PBEF, PBEF1, VF, VISFATIN, NAmPRTase pre-B cell-enhancing factor pre-B-cell colony enhancing factor 1
HGNC:	30092
UniProt:	P43490

## Application Details

Application Notes:	• The supplier is only responsible for the kit itself, but not for the samples consumed during the
	assay. The user should calculate the possible amount of the samples used in the whole test.
	Please reserve sufficient samples in advance.
	<ul> <li>Samples to be used within 5 days may be stored at 2-8°C, otherwise samples must be stored</li> </ul>
	at -20°C ( $\leq$ 1 month) or -80°C ( $\leq$ 2 months) to avoid loss of bioactivity and contamination.
	<ul> <li>Grossly hemolyzed samples are not suitable for use in this assay.</li> </ul>
	If the samples are not indicated in the manual, a preliminary experiment to determine the
	validity of the kit is necessary.
	• Please predict the concentration before assaying. If values for these are not within the range
	of the standard curve, users must determine the optimal sample dilutions for their particular
	experiments.
	Tissue or cell extraction samples prepared by chemical lysis buffer may cause unexpected
	ELISA results due to the impacts of certain chemicals.
	Owing to the possibility of mismatching between antigens from another resource and
	antibodies used in this supplier's kits (e.g., antibody targets conformational epitope rather
	than linear epitope), some native or recombinant proteins from other manufacturers may not
	be recognized by this supplier's products.

	protection when using this material.
Handling Advice:	<ul> <li>The kit should not be used beyond the expiration date on the kit label.</li> <li>Do not mix or substitute reagents with those from other lots or sources.</li> <li>If samples generate values higher than the highest standard, dilute the samples with Sample Diluent and repeat the assay.</li> <li>Any variation in Sample Diluent, operator, pipetting technique, washing technique, incubation time/temperature and kit age can cause variation in binding.</li> <li>This assay is designed to eliminate interference by soluble receptors, binding proteins and other factors present in biological samples. Until all factors have been tested in the Immunoassay, the possibility of interference cannot be excluded.</li> </ul>
Storage:	4 °C/-20 °C
Storage Comment:	For unopened kit: All the reagents should be kept according to the labels on vials.
Expiry Date:	6 months
