Datasheet for ABIN368089 Noradrenaline ELISA Kit

1 Image

6 Publications

Overview

Quantity:	96 tests
Target:	Noradrenaline
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	0.49-2000 pg/mL
Minimum Detection Limit:	0.49 pg/mL
Application:	ELISA

Product Details

Purpose:	For the quantitative determination of endogenic rat noradrenaline (NA) concentrations in serum, plasma and tissue homogenates.
Sample Type:	Serum, Plasma
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of rat NA.
Cross-Reactivity (Details):	Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between the target antigen and all analogues for other species. Therefore, cross reaction may still exist.
Sensitivity:	0.49 pg/mL
Components:	Assay plate (12 × 8 coated Microwells)

	 Standard (freeze dried) Biotin-antibody (100 × concentrate) HRP-avidin (100 × concentrate) Biotin-antibody Diluent HRP-avidin Diluent Sample Diluent Sample Diluent Wash Buffer (25 × concentrate) TMB Substrate Stop Solution Adhesive Strip (for 96 wells) Instruction manual
Material not included:	 Microplate reader capable of measuring absorbance at 450nm, with the correction wavelength set at 540nm or 570nm. An incubator which can provide stable incubation conditions up to 37°C ± 0.5°C. Squirt bottle, manifold dispenser or automated microplate washer. Absorbent paper for blotting the microtiter plate. 100mL and 500mL graduated cylinders. Deionized or distilled water. Pipettes and pipette tips. Test tubes for dilution.

Target Details

Target:	Noradrenaline
Alternative Name:	Noradrenaline (NA) (Noradrenaline Products)
Target Type:	Chemical

Application Details

assay. The user should calco Please reserve sufficient sar • Samples to be used within 5 at -20°C (≤ 1 month) or -80°C • Grossly hemolyzed samples • If the samples are not indica validity of the kit is necessar • Please predict the concentra	to days may be stored at 2-8°C, otherwise samples must be stored C (≤ 2 months) to avoid loss of bioactivity and contamination. The are not suitable for use in this assay. The manual, a preliminary experiment to determine the

	 Tissue or cell extraction samples prepared by chemical lysis buffer may cause unexpected ELISA results due to the impacts of certain chemicals. Owing to the possibility of mismatching between antigens from another resource and antibodies used in this supplier's kits (e.g., antibody targets conformational epitope rather than linear epitope), some native or recombinant proteins from other manufacturers may not be recognized by this supplier's products. Influenced by factors including cell viability, cell number and cell sampling time, samples from cell culture supernatant may not be recognized by the kit. Fresh samples without long time storage are recommended for the test. Otherwise, protein degradation and denaturalization may occur in those samples and finally lead to wrong results.
Comment:	Detection wavelength: 450 nm
	Information on standard material:
	Depending on the antigen to be detected, standards can be either native or recombinant
	protein. The recombinant proteins are being expressed in CHO cells in most cases. Please
	inquire for more information. The formulation of auxiliary material in the standard is considered
	proprietary information, however it does not contain any poisonous substance. Proclin 300
	(1:3000) is used as preservative.
	Information on reagents:
	In most cases the stop solution provided is 1 N H2SO4. The formulation of wash solution is
	proprietary information. None of the components contain (sodium) azide, thimerosal, 2-
	mercaptoethanol (2-ME) or any other poisonous materials. For the sandwich method kits, the
	sample diluent, antibody diluent, enzyme diluent and standard all contain BSA.
	Information on antibodies:
	The antibodies provided in different kits vary in regards to clonality and host. Some antibodies
	are affinity purified, some are Protein A
Sample Volume:	100 µL
Assay Time:	1 - 4.5 h
Plate:	Pre-coated
Protocol:	This assay employs the quantitative sandwich enzyme immunoassay technique. Antibody
	specific for NA has been pre-coated onto a microplate. Standards and samples are pipetted
	into the wells and any NA present is bound by the immobilized antibody. After removing any
	unbound substances, a biotin-conjugated antibody specific for NA is added to the wells. After

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/6 | Product datasheet for ABIN368089 | 09/12/2023 | Copyright antibodies-online. All rights reserved.

	washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells
	and color develops in proportion to the amount of NA bound in the initial step. The color
	development is stopped and the intensity of the color is measured.
Sample Collection:	 Serum: Use a serum separator tube (SST) and allow samples to clot for two hours at room temperature or overnight at 4 °C before centrifugation for 15 minutes at 1000 × g. Remove serum and assay immediately or aliquot and store samples at -20 °C or -80 °C. Avoid repeated freeze-thaw cycles. Plasma: Collect plasma using EDTA or heparin as an anticoagulant. Centrifuge for 15 minutes at 1000 × g at 2-8 °C within 30 minutes of collection. Assay immediately or aliquot and store samples at -20 °C or -80 °C. Avoid repeated freeze-thaw cycles. Tissue Homogenates: Rinse 100 mg tissue with 1× PBS, homogenize in 1mL of 1× PBS and store overnight at -20 °C. After two freeze-thaw cycles to break the cell membranes, centrifuge the homogenates for 5 minutes at 5000 × g, 2-8 °C. Remove and assay the supernate immediately. Alternatively, aliquot and store samples at -20 °C or -80 °C.
	Centrifuge the sample again after thawing before the assay. Avoid repeated freeze-thaw cycles.
Calculation of Results:	Average the duplicate readings for each standard and sample and subtract the average zero
	standard optical density.
	Create a standard curve by reducing the data using computer software capable of generating a
	four parameter logistic (4-PL) curve fit. As an alternative, construct a standard curve by plotting
	the mean absorbance for each standard on the x-axis against the concentration on the y-axis
	and draw a best fit curve through the points on the graph. The data may be linearized by
	plotting the log of the target antigen concentration versus the log of the O.D. and the best fit line
	can be determined by regression analysis. This procedure will produce an adequate but less
	precise fit of the data.
	If samples have been diluted, the concentration read from the standard curve must be
	multiplied by the dilution factor.
Assay Precision:	Intra-assay precision (precision within an assay): Three samples of known concentration were
	tested twenty times on one plate to assess precision.
	Inter-assay precision (precision between assays): Three samples of known concentration were
	tested in twenty assays to assess precision.
	Intra-assay: CV% less than 8%
	Inter-assay: CV% less than 10%
Restrictions:	For Research Lise only

Handling

-	
Precaution of Use:	The Stop Solution provided with this kit is an acid solution. Wear eye, hand, face and clothing
	protection when using this material.
Handling Advice:	• The kit should not be used beyond the expiration date on the kit label.
	 Do not mix or substitute reagents with those from other lots or sources.
	 If samples generate values higher than the highest standard, dilute the samples with Sample Diluent and repeat the assay.
	• Any variation in Sample Diluent, operator, pipetting technique, washing technique, incubation time/temperature and kit age can cause variation in binding.
	This assay is designed to eliminate interference by soluble receptors, binding proteins and
	other factors present in biological samples. Until all factors have been tested in the
	Immunoassay, the possibility of interference cannot be excluded.
Storage:	4 °C/-20 °C
Storage Comment:	For unopened kit: All the reagents should be kept according to the labels on vials.
Expiry Date:	6 months
