Datasheet for ABIN369762 Neuro-Oncological Ventral Antigen 1 (NOVA1) Peptide

Overview

Quantity	100 μα
Quantity:	100 µg
Target:	NOVA1
Origin:	Human
Source:	Synthetic
Application:	Blocking Peptide (BP), Immunogen (Imm)
Product Details	
Sequence:	REMPQNVAKT EPVS
Characteristics:	The peptide was used in the production of ABIN369762 - Goat Anti-NOVA1 Antibody. It is currently untested in blocking applications.
Target Details	
Target:	NOVA1
Application Details	
Application Notes:	When peptides are reconstituted in 200ul water, the concentration would be also 0.5mg/ml. To
	start, the best ratio would be 1:1 (which means molar excess of peptides relative to antibodies
	when identical volumes are mixed). Please mix equal volumes of peptide and antibody at the
	required dilution and leave at ambient temperature. Best is to have two identical blots, to be
	incubated with equal amount of antibodies, but one with the antibodies pre-adsorbed to the
	peptide for 20min. Then incubate and develop in parallel the two blots.
Restrictions:	For Research Use only

Handling

Format:	Lyophilized	
Reconstitution:	Reconstitute pellet in distilled water where required. For Blocking studies, reconstitute pellet in 200µl distilled water to obtain a 0.5mg/ml peptide solution.	
Buffer:	100µg of Lyophilised peptide, formulation De-ionized (DI) water.	
Storage:	-20 °C	
Storage Comment:	Shipped at ambient temperature, store at -20°C.
