# Datasheet for ABIN411254 INHBA ELISA Kit

1 Image

1 Publication

#### Overview

Quantity:	96 tests
Target:	INHBA
Binding Specificity:	AA 311-426
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	15.6-1000 pg/mL
Minimum Detection Limit:	15.6 pg/mL
Application:	ELISA

#### Product Details

Purpose:	Sandwich High Sensitivity ELISA kit for Quantitative Detection of Human Activin A				
Brand:	PicoKine™				
Sample Type:	Cell Culture Supernatant, Serum, Plasma (heparin), Plasma (EDTA), Saliva				
Analytical Method:	Quantitative				
Detection Method:	Colorimetric				
Immunogen:	Expression system for standard: CHO				
	Immunogen sequence: G311-S426				
Specificity:	Expression system for standard: CHO				
	Immunogen sequence: G311-S426				
Cross-Reactivity (Details):	There is no detectable cross-reactivity with other relevant proteins.

#### Product Details

Predicted Reactivity:	Bovine,Monkey,Rabbit
Sensitivity:	<12pg/mL
Material not included:	Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette tips. Multichannel pipettes are recommended in the condition of large amount of samples in the
	detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation
	of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl

## Target Details

Target:	INHBA
Alternative Name:	INHBA (INHBA Products)
Background:	Protein Function: Inhibins and activins inhibit and activate, respectively, the secretion of
	follitropin by the pituitary gland. Inhibins/activins are involved in regulating a number of diverse
	functions such as hypothalamic and pituitary hormone secretion, gonadal hormone secretion,
	germ cell development and maturation, erythroid differentiation, insulin secretion, nerve cell
	survival, embryonic axial development or bone growth, depending on their subunit compositior
	Inhibins appear to oppose the functions of activins.
	Background: Activin A is a homodimer of 14 kDa beta-A. Activin A, a cytokine member of the
	transforming growth factor-beta superfamily, is expressed locally by the mesenchymal
	component of the hemopoietic microenvironment. Its expression is regulated on the mRNA
	level by different cytokines, and the biological activity of the protein is tightly controlled by
	several inhibitory molecules. Inhibins and activins are members of the transforming growth
	factor beta superfamily and are known to modulate the growth and differentiation of several
	cell types. Inhibins and activins inhibit and activate, respectively, the secretion of follitropin by
	the pituitary gland. Inhibins/activins are involved in regulating a number of diverse functions
	such as hypothalamic and pituitary hormone secretion, gonadal hormone secretion, germ cell
	development and maturation, erythroid differentiation, insulin secretion, nerve cell survival,
	embryonic axial development or bone growth, depending on their subunit composition. Inhibing
	appear to oppose the functions of activins. The standard product used in this kit is recombinar
	Activin A, which is composed of two single chains of 116 amino acids with the molecular mass
	of 26KDa.
	Synonyms: Inhibin, beta A (Activin A, activin AB alpha polypeptide) ,Inhibin, beta A (Activin A,
	activin AB alpha polypeptide), isoform CRA_a ,cDNA FLJ75379, highly similar to Homo sapiens
	inhibin, beta A (activin A, activin AB alpha polypeptide), mRNA ,INHBA ,hCG_17267 , tcag7.474 ,
	Full Gene Name: inhibin, beta A

	Cellular Localisation: Secreted.				
Gene ID:	3624				
UniProt:	A4D1W7				
Pathways:	Hormone Transport, Peptide Hormone Metabolism, Hormone Activity, Negative Regulation of				
	Hormone Secretion, Autophagy				

## Application Details

Application Notes:	Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well
	assay was recommended for both standard and sample testing.
Comment:	Tissue Specificity: Uterus, ovary and liver.
Plate:	Pre-coated
Protocol:	human Activin A ELISA Kit was based on standard sandwich enzyme-linked immune-sorbent
	assay technology. A monoclonal antibody from mouse specific for Activin A has been
	precoated onto 96-well plates. Standards(CHO, G311-S426) and test samples are added to the
	wells, a biotinylated detection monoclonal antibody from mouse specific for Activin A is added
	subsequently and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase
	Complex was added and unbound conjugates were washed away with PBS or TBS buffer. HRP
	substrate TMB was used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to
	produce a blue color product that changed into yellow after adding acidic stop solution. The
	density of yellow is proportional to the human Activin A amount of sample captured in plate.
Assay Procedure:	Aliquot 0.1 mL per well of the 1000pg/mL, 500pg/mL, 250pg/mL, 125pg/mL, 62.5pg/mL,
	31.2pg/mL, 15.6pg/mL human Activin A standard solutions into the precoated 96-well plate.
	Add 0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each
	properly diluted sample of human cell culture supernates, serum, plasma(heparin, EDTA) or
	saliva to each empty well. See "Sample Dilution Guideline" above for details. It is recommended
	that each human Activin A standard solution and each sample be measured in duplicate.
Assay Precision:	<ul> <li>Sample 1: n=16, Mean(pg/ml): 90, Standard deviation: 4.7, CV(%): 5.2</li> </ul>
	<ul> <li>Sample 2: n=16, Mean(pg/ml): 281, Standard deviation: 15.7, CV(%): 5.6</li> </ul>
	<ul> <li>Sample 3: n=16, Mean(pg/ml): 467, Standard deviation: 27.6, CV(%): 5.9,</li> </ul>
	<ul> <li>Sample 1: n=24, Mean(pg/ml): 95, Standard deviation: 7.8, CV(%): 8.2</li> </ul>
	<ul> <li>Sample 2: n=24, Mean(pg/ml): 293, Standard deviation: 18.5, CV(%): 6.3</li> </ul>
	<ul> <li>Sample 3: n=24, Mean(pg/ml): 489, Standard deviation: 24.9, CV(%): 5.1</li> </ul>

Handling				
Handling Advice:	Avoid multiple freeze-thaw cycles.			
Storage:	-20 °C,4 °C			
Storage Comment:	Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles			
Expiry Date:	12 months
