# **IL1A ELISA Kit**

**Publications** 

### Overview

| Quantity:                | 96 tests       |
|--------------------------|----------------|
| Target:                  | IL1A           |
| Binding Specificity:     | AA 115-270     |
| Reactivity:              | Rat            |
| Method Type:             | Sandwich ELISA |
| Detection Range:         | 4.69-300 pg/mL |
| Minimum Detection Limit: | 4.69 pg/mL     |
| Application:             | ELISA          |

### **Product Details**

| Purpose:                    | Sandwich High Sensitivity ELISA kit for Quantitative Detection of Rat IL-1 alpha |
|-----------------------------|--|
| Brand:                      | PicoKine™  |
| Sample Type:                | Cell Culture Supernatant, Serum  |
| Analytical Method:          | Quantitative   |
| Detection Method:           | Colorimetric   |
| Immunogen:                  | Expression system for standard: E.coli   |
|                             | Immunogen sequence: S115-S270  |
| Specificity:                | Expression system for standard: E.coli,S115-S270                                 |
| Cross-Reactivity (Details): | There is no detectable cross-reactivity with other relevant proteins.            |
| Sensitivity:                | <0.5pg/mL  |

### **Product Details**

Material not included:

Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette tips. Multichannel pipettes are recommended in the condition of large amount of samples in the detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl

## **Target Details**

| rarget Details    |   |
|-------------------|---|
| Target:           | IL1A  |
| Alternative Name: | IL1A (IL1A Products)  |
| Background:       | Protein Function: Produced by activated macrophages, IL-1 stimulates thymocyte proliferation      |
|                   | by inducing IL-2 release, B-cell maturation and proliferation, and fibroblast growth factor       |
|                   | activity. IL-1 proteins are involved in the inflammatory response, being identified as endogenous |
|                   | pyrogens, and are reported to stimulate the release of prostaglandin and collagenase from         |
|                   | synovial cells.   |
|                   | Background: Interleukin-1 alpha(IL-1 alpha) and interleukin-1 beta(IL-1 beta) are two             |
|                   | biochemically distinct, but distantly related, polypeptidic cytokines that play a key role in     |
|                   | inflammation, immunologic reactions, and tissue repair. IL-1 alpha has been implicated in the     |
|                   | pathogenesis of infectious, autoimmune and inflammatory diseases. Recently, it has been           |
|                   | shown that IL-1 alpha is identical to hematopoietin 1, which is described as a hematopoietic      |
|                   | growth factor acting on early progenitor cells in synergy with other hematopoietic growth         |
|                   | factors.1 The human interleukin 1 alpha gene is assigned to chromosome 2. Genetic                 |
|                   | polymorphisms at interleukin(IL)-1alpha and IL-1beta have been recently suggested to be           |
|                   | associated with severity of adult periodontitis. The murine IL-1 alpha and IL-1 beta genes        |
|                   | encode structurally and evolutionarily related cytokines that exert a regulatory role in numerous |
|                   | physiological processes including hemopoiesis. The standard product used in this kit is           |
|                   | recombinant rat IL-1alpha with the molecular mass of 18 kDa.                                      |
|                   | Synonyms: Interleukin-1 alpha,IL-1 alpha,Il1a,  |
|                   | Full Gene Name: Interleukin-1 alpha   |
|                   | Cellular Localisation: Secreted. The lack of a specific hydrophobic segment in the precursor      |
|                   | sequence suggests that IL-1 is released by damaged cells or is secreted by a mechanism            |
|                   | differing from that used for other secretory proteins.  |
| Gene ID:          | 24493   |
| UniProt:          | P16598  |
| Pathways:         | NF-kappaB Signaling, Autophagy, Cancer Immune Checkpoints   |

# **Application Details**

| Application Notes: | Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well   |
|--------------------|--|
|                    | assay was recommended for both standard and sample testing.  |
| Plate:             | Pre-coated   |
| Protocol:          | rat IL-1 alpha ELISA Kit was based on standard sandwich enzyme-linked immune-sorbent assa  |
|                    | technology. A monoclonal antibody from mouse specific for IL-1 alpha has been precoated  |
|                    | onto 96-well plates. Standards (E.coli,S115-S270) and test samples are added to the wells, a   |
|                    | biotinylated detection polyclonal antibody from goat specific for IL-1 alpha is added  |
|                    | subsequently and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase   |
|                    | Complex was added and unbound conjugates were washed away with PBS or TBS buffer. HRF  |
|                    | substrate TMB was used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to  |
|                    | produce a blue color product that changed into yellow after adding acidic stop solution. The   |
|                    | density of yellow is proportional to the rat IL-1 alpha amount of sample captured in plate.  |
| Assay Procedure:   | Aliquot 0.1 mL per well of the 300pg/mL, 150pg/mL, 75pg/mL, 37.5pg/mL, 18.8pg/mL,  |
|                    | 9.4pg/mL, 4.69pg/mL rat IL-1 alpha standard solutions into the precoated 96-well plate. Add  |
|                    | 0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each  |
|                    |  |
|                    | properly diluted sample of rat cell culture supernates or serum to each empty well. See "Sampl   |
|                    | Dilution Guideline" above for details. We recommend that each rat IL-1 alpha standard solution   |
|                    | and each sample is measured in duplicate.  |
| Assay Precision:   | <ul> <li>Sample 1: n=16, Mean(pg/ml): 45, Standard deviation: 1.89, CV(%): 4.2</li> </ul>  |
|                    | • Sample 2: n=16, Mean(pg/ml): 137, Standard deviation: 6.58, CV(%): 4.8   |
|                    | <ul> <li>Sample 3: n=16, Mean(pg/ml): 211, Standard deviation: 10.76, CV(%): 5.1,</li> <li>Sample 1: n=24, Mean(pg/ml): 49, Standard deviation: 2.646, CV(%): 5.4</li> </ul> |
|                    | <ul> <li>Sample 1: n=24, Mean(pg/ml): 49, Standard deviation: 2.646, CV(%): 5.4</li> <li>Sample 2: n=24, Mean(pg/ml): 145, Standard deviation: 8.99, CV(%): 6.2</li> </ul>   |
|                    | Sample 3: n=24, Mean(pg/ml): 230, Standard deviation: 15.41, CV(%): 6.7  |
|                    | ourriple 6.11 24, Meuri(pg/1111). 200, Glaridard deviation. 10.41, 6 v (70). 6.7   |
| Restrictions:      | For Research Use only  |
| Handling           |  |
| Handling Advice:   | Avoid multiple freeze-thaw cycles.   |
| Storage:           | -20 °C,4 °C  |
| Storage Comment:   | Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles   |
| Expiry Date:       | 12 months  |
|                    |  |
