MMP8 ELISA Kit

Image

Publications

Overview

Quantity:	96 tests
Target:	MMP8
Binding Specificity:	AA 21-467
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	156-10000 pg/mL
Minimum Detection Limit:	156 pg/mL
Application:	ELISA

Product Details

Purpose:	Sandwich High Sensitivity ELISA kit for Quantitative Detection of Human MMP-8
Brand:	PicoKine™
Sample Type:	Cell Culture Supernatant, Serum, Plasma (heparin), Saliva
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Immunogen:	Expression system for standard: NSO
	Immunogen sequence: F21-G467
Specificity:	Expression system for standard: NSO
	Immunogen sequence: F21-G467
Cross-Reactivity (Details):	There is no detectable cross-reactivity with other relevant proteins.

Product Details

Sensitivity:	<10pg/mL
Material not included:	Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette
	tips. Multichannel pipettes are recommended in the condition of large amount of samples in the
	detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl
Target Details	
Target:	MMP8
Alternative Name:	MMP8 (MMP8 Products)
Background:	Protein Function: Can degrade fibrillar type I, II, and III collagens.
	Background: Matrix metalloproteinase 8(MMP8) also called neutrophil collagenase. Neutrophil
	collagenase, a member of the family of matrix metalloproteinases, is distinct from the
	collagenase of skin fibroblasts and synovial cells in substrate specificity and immunologic
	crossreactivity. MMP8, an enzyme that degrades fibrillar collagens imparting strength to the
	fetal membranes, is expressed by leukocytes and chorionic cytotrophoblast cells. The human
	neutrophil collagenase(HNC) cDNA clone has been sequenced and shown to encode a 467-
	residue protein. Neutrophil collagenase has been found to possess 57 % identity with the
	deduced protein sequence for fibroblast collagenase with 72 % chemical similarity. Certain
	regions of the molecule, including the putative zinc-binding region, are highly conserved. When
	compared with the published sequence for fibroblast collagenase, neutrophil collagenase
	contains four additional sites for glycosylation. The standard product used in this kit is natural,
	isolating from human MMP-8. The detected MMP-8 includes zymogen and active enzyme.
	Synonyms: Neutrophil collagenase,3.4.24.34,Matrix metalloproteinase-8,MMP-8,PMNL
	collagenase,PMNL-CL,MMP8,CLG1,
	Full Gene Name: Neutrophil collagenase
	Cellular Localisation: Cytoplasmic granule. Secreted, extracellular space, extracellular matrix .
	Stored in intracellular granules.
Gene ID:	4317
UniProt:	P22894
Application Details	
Application Notes:	Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well
	assay was recommended for both standard and sample testing.

Application Details

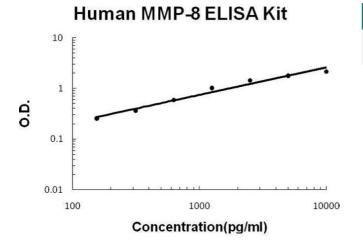

Comment:	Sequence similarities: Belongs to the peptidase M10A family.
	Tissue Specificity: Neutrophils.
Plate:	Pre-coated
Protocol:	human MMP-8 ELISA Kit was based on standard sandwich enzyme-linked immune-sorbent
	assay technology. A monoclonal antibody from mouse specific for MMP-8 has been precoated
	onto 96-well plates. Standards(NSO, F21-G467) and test samples are added to the wells, a
	biotinylated detection polyclonal antibody from goat specific for MMP-8 is added subsequently
	and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase Complex was
	added and unbound conjugates were washed away with PBS or TBS buffer. HRP substrate
	TMB was used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a
	blue color product that changed into yellow after adding acidic stop solution. The density of
	yellow is proportional to the human MMP-8 amount of sample captured in plate.
Assay Procedure:	Aliquot 0.1 mL per well of the 10000pg/mL, 5000pg/mL, 2500pg/mL, 1250pg/mL, 625pg/mL,
, loody i rooddal e.	312pg/mL, 156pg/mL human MMP-8 standard solutions into the precoated 96-well plate. Add
	0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each
	properly diluted sample of human cell culture supernates, serum, plasma (heparin) or saliva to
	each empty well. See "Sample Dilution Guideline" above for details. It is recommended that
	each human MMP-8 standard solution and each sample be measured in duplicate.
Assay Precision:	 Sample 1: n=16, Mean(pg/ml): 1275, Standard deviation: 56.1, CV(%): 4.4
	• Sample 2: n=16, Mean(pg/ml): 3563, Standard deviation: 185.3, CV(%): 5.2
	Sample 3: n=16, Mean(pg/ml): 6822, Standard deviation: 395.7, CV(%): 5.8, Sample 3: n=16, Mean(pg/ml): 1070.0:
	Sample 1: n=24, Mean(pg/ml): 1370, Standard deviation: 69.87, CV(%): 5.1 Sample 2: n=24, Mean(an/an/an/an/andard-deviation: 648.80, CV(%): 6.5
	• Sample 2: n=24, Mean(pg/ml): 3728, Standard deviation: 242.32, CV(%): 6.5
	 Sample 3: n=24, Mean(pg/ml): 7142, Standard deviation: 521.4, CV(%): 7.3
Restrictions:	For Research Use only
Handling	
Handling Advice:	Avoid multiple freeze-thaw cycles.
Storage:	-20 °C,4 °C
Storage Comment:	Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles
Expiry Date:	12 months
