Datasheet for ABIN411353 TGFB1 ELISA Kit

1 Image

25 Publications

Overview

Quantity:	96 tests
Target:	TGFB1
Binding Specificity:	AA 279-390
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	15.6-1000 pg/mL
Minimum Detection Limit:	15.6 pg/mL
Application:	ELISA

Product Details

Purpose:	Sandwich High Sensitivity ELISA kit for Quantitative Detection of activated Human TGF beta 1
Brand:	PicoKine™
Sample Type:	Cell Culture Supernatant, Serum, Plasma (EDTA), Urine
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Immunogen:	Expression system for standard: CHO
	Immunogen sequence: A279-S390
Specificity:	Expression system for standard: CHO
	Immunogen sequence: A279-S390
Cross-Reactivity (Details):	There is cross-reactivity with TGF beta 2, TGF beta 3, TGF beta 5<1 % .

Product Details

Predicted Reactivity:	Bovine,Canine,Monkey,Rabbit
Sensitivity:	<1pg/mL
Material not included:	Microplate reader in standard size. Automated plate washer. Adjustable pipettes and pipette tips. Multichannel pipettes are recommended in the condition of large amount of samples in the
	detection. Clean tubes and Eppendorf tubes. Washing buffer (neutral PBS or TBS). Preparation
	of 0.01M TBS: Add 1.2g Tris, 8.5g Nacl

Target Details

Target:	TGFB1
Alternative Name:	TGFB1 (TGFB1 Products)
Background:	Protein Function: Multifunctional protein that controls proliferation, differentiation and other
	functions in many cell types. Many cells synthesize TGFB1 and have specific receptors for it. It
	positively and negatively regulates many other growth factors. It plays an important role in bone
	remodeling as it is a potent stimulator of osteoblastic bone formation, causing chemotaxis,
	proliferation and differentiation in committed osteoblasts. Can promote either T- helper 17 cells
	(Th17) or regulatory T-cells (Treg) lineage differentiation in a concentration-dependent manner.
	At high concentrations, leads to FOXP3-mediated suppression of RORC and down-regulation of
	IL-17 expression, favoring Treg cell development. At low concentrations in concert with IL-6 and
	IL-21, leads to expression of the IL-17 and IL-23 receptors, favoring differentiation to Th17 cells.
	Background: Transforming growth factor-beta1(TGF-beta1) is a multifunctional peptide that
	controls proliferation, differentiation, and other functions in many cell types. Many cells
	synthesize TGF-beta and essentially all of them have specific receptors for this peptide. TGF-
	beta regulates the actions of many other peptide growth factors and determines a positive or
	negative direction of their effects.TGFbeta1 is known for its potent and diverse biological
	effects, including immune regulation, and cell growth and differentiation.TGFbeta1 is also an
	important mediator of bone remodeling.TGFbeta1, a potent keratinocyte growth inhibitor, has
	been shown to be overexpressed in keratinocytes in certain inflammatory skin diseases and
	has been thought to counteract the effects of other growth factors at the site of
	inflammation.TGF-beta1, a multifunctional cytokine with fibrogenic properties, has been
	implicated in the pathogenesis of the vascular and target organ complications of hypertension.
	TGF-beta1 may also regulate blood pressure via stimulation of endothelin-1 and/or renin
	secretion. TGFbeta1 is secreted as a latent form, which consists of its mature form and a
	latency-associated peptide(beta1-LAP) in either the presence or the absence of additional laten

	TGF-beta1-binding protein. The standard product used in this kit is recombinant TGFbeta1 with
	the molecular mass of 25KDa.
	Synonyms: Transforming growth factor beta-1,TGF-beta-1,Latency-associated
	peptide,LAP,TGFB1,TGFB,
	Full Gene Name: Transforming growth factor beta-1
	Cellular Localisation: Secreted, extracellular space, extracellular matrix.
Gene ID:	7040
UniProt:	P01137
Pathways:	EGFR Signaling Pathway, Dopaminergic Neurogenesis, Cellular Response to Molecule of
	Paatarial Origin, Chroacominaghaan Matabalia Process, Degulation of Laukaanta Madiatad
	Bacterial Origin, Glycosaminoglycan Metabolic Process, Regulation of Leukocyte Mediated
	Immunity, Regulation of Muscle Cell Differentiation, Positive Regulation of Immune Effector
	Immunity, Regulation of Muscle Cell Differentiation, Positive Regulation of Immune Effector
	Immunity, Regulation of Muscle Cell Differentiation, Positive Regulation of Immune Effector Process, Cell-Cell Junction Organization, Production of Molecular Mediator of Immune
	Immunity, Regulation of Muscle Cell Differentiation, Positive Regulation of Immune Effector Process, Cell-Cell Junction Organization, Production of Molecular Mediator of Immune Response, Ribonucleoside Biosynthetic Process, Skeletal Muscle Fiber Development,

Application Details

Application Notes:	Before using Kit, spin tubes and bring down all components to bottom of tube. Duplicate well assay was recommended for both standard and sample testing.
Comment:	Sequence similarities: Belongs to the TGF-beta family.
	Tissue Specificity: Highly expressed in bone. Abundantly expressed in articular cartilage and
	chondrocytes and is increased in osteoarthritis (OA). Colocalizes with ASPN in chondrocytes
	within OA lesions of articular cartilage
Plate:	Pre-coated
Protocol:	human TGF beta 1 ELISA Kit was based on standard sandwich enzyme-linked immune-sorbent
	assay technology. A monoclonal antibody from mouse specific for TGF beta 1 has been
	precoated onto 96-well plates. Standards(CHO, A279-S390) and test samples are added to the
	wells, a biotinylated detection polyclonal antibody from goat specific for TGF beta 1 is added
	subsequently and then followed by washing with PBS or TBS buffer. Avidin-Biotin-Peroxidase
	Complex was added and unbound conjugates were washed away with PBS or TBS buffer. HRP
	substrate TMB was used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to
	produce a blue color product that changed into yellow after adding acidic stop solution. The
	density of yellow is proportional to the human TGF beta 1 amount of sample captured in plate.

Assay Procedure:	Aliquot 0.1 mL per well of the 1000pg/mL, 500pg/mL, 250pg/mL, 125pg/mL, 62.5pg/mL,
	31.2pg/mL, 15.6pg/mL human TGF beta 1 standard solutions into the precoated 96-well plate.
	Add 0.1 mL of the sample diluent buffer into the control well (Zero well). Add 0.1 mL of each
	properly diluted sample of activated human in cell culture supernates, serum, plasma (EDTA) or
	urine to each empty well. See "Sample Dilution Guideline" above for details. It is recommended
	that each human TGF beta 1 standard solution and each sample be measured in duplicate.
Assay Precision:	• Sample 1: n=16, Mean(pg/ml): 135, Standard deviation: 5.94, CV(%): 4.4
	Sample 2: n=16, Mean(pg/ml): 264, Standard deviation: 13.73, CV(%): 5.2
	 Sample 3: n=16, Mean(pg/ml): 521, Standard deviation: 18.8, CV(%): 3.6,
	Sample 1: n=24, Mean(pg/ml): 152, Standard deviation: 7.6, CV(%): 5
	 Sample 2: n=24, Mean(pg/ml): 270, Standard deviation: 17.3, CV(%): 6.4
	• Sample 3: n=24, Mean(pg/ml): 543, Standard deviation: 32.04, CV(%): 5.9
Restrictions:	For Research Use only
Handling	
Handling Advice:	Avoid multiple freeze-thaw cycles.
Storage:	-20 °C,4 °C
Storage Comment:	Store at 4°C for 6 months, at -20°C for 12 months. Avoid multiple freeze-thaw cycles
Expiry Date:	12 months
