Datasheet for ABIN4219120

Opti-Seal qPCR Semi-skirted plate (Low profile)

Overview

Quantity:	10 plates
Application:	Quantitative real-time PCR (qPCR)

Product Details

Specificity: All Opti-Seal qPCR plates are nucleases-free, pyrogen-free, and nucleic acids-free.

Compatible Machine:

- ABI-7500 Fast
- ABI-7900HT Fast 96-well Block
- ABI-ViiA7TM Fast
- ABI-StepOne PlusTM

Characteristics: Opti-Seal qPCR plates are 96 wells plate made in a standard 8*12 configuration with thin-walled design, allowing rapid and efficient thermal transfer. Opti-Seal qPCR plates have both standard(0.2 mL) and low-profile (0.1 mL) versions tailoring to your needs. All Opti-Seal qPCR plates are molded with precision from high-quality polypropylene to achieve optimal well-to-well and plate-to-plate consistency. The interior of the wells has an ultra smooth and inert surface on which nucleic acids and enzymes do not bind to. Opti-Seal qPCR plates have alphanumeric grid for easy sample identification. In addition, all Opti-Seal qPCR plates are nucleases-free, pyrogen-free, and nucleic acids-free.

Application Details

Application Notes: Sealing can be performed with Opti-Seal qPCR Sealing and Storage Films which is compatible with almost all 96-well thermal cyclers.

Application Details

Comment: 10 Plates/Box

Restrictions: For Research Use only
