# Datasheet for ABIN431632 Vitamin D-Binding Protein ELISA Kit

Image

Overview

Quantity:	96 tests
Target:	Vitamin D-Binding Protein (GC)
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	3.12 ng/mL - 200 ng/mL
Minimum Detection Limit:	3.12 ng/mL
Application:	ELISA
Product Details	
Purpose:	The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of DBP in rat serum, plasma.
	We offer <b>validation data</b> (WB) <b>for the kit components</b> . So you can be sure to order a reliable ELISA kit product composed of high quality reagents.
Sample Type:	Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of Vitamin D Binding Protein (DBP). No significant cross-reactivity or interference between Vitamin D Binding Protein (DBP) and analogues was observed.

Product Details	
Cross-Reactivity (Details):	No significant cross-reactivity or interference between Vitamin D Binding Protein (DBP) and analogues was observed.
Sensitivity:	1.42 ng/mL
Components:	<ul> <li>Pre-coated, ready to use 96-well strip plate, flat buttom</li> <li>Plate sealer for 96 wells</li> <li>Reference Standard</li> <li>Standard Diluent</li> <li>Detection Reagent A</li> <li>Detection Reagent B</li> <li>Assay Diluent A</li> <li>Assay Diluent B</li> <li>Reagent Diluent (if Detection Reagent is lyophilized)</li> <li>TMB Substrate</li> <li>Stop Solution</li> <li>Wash Buffer (30 x concentrate)</li> </ul>

Instruction manual

### Target Details

Target:	Vitamin D-Binding Protein (GC)
Alternative Name:	Vitamin D Binding Protein (DBP) (GC Products)
UniProt:	P04276
Pathways:	Metabolism of Steroid Hormones and Vitamin D, Monocarboxylic Acid Catabolic Process

### Application Details

Application Notes:
Limited by the current condition and scientific technology, we cannot completely conduct the comprehensive identification and analysis on the raw material provided by suppliers. So there might be some qualitative and technical risks to use the kit.
The final experimental results will be closely related to validity of the products, operation skills of the end users and the experimental environments. Please make sure that sufficient samples are available.
Kits from different batches may be a little different in detection range, sensitivity and color developing time.
Do not mix or substitute reagents from one kit lot to another. Use only the reagents supplied by manufacturer.
Protect all reagents from strong light during storage and incubation. All the bottle caps of reagents should be covered tightly to prevent the evaporation and contamination of microorganism.

	<ul> <li>There may be some foggy substance in the wells when the plate is opened at the first time. It will not have any effect on the final assay results. Do not remove microtiter plate from the storage bag until needed.</li> <li>Wrong operations during the reagents preparation and loading, as well as incorrect parameter setting for the plate reader may lead to incorrect results. A microplate plate reader with a bandwidth of 10nm or less and an optical density range of 0-3 0.D. or greater at 450 ± 10nm wavelength is acceptable for use in absorbance measurement. Please read the instruction carefully and adjust the instrument prior to the experiment.</li> <li>Even the same operator might get different results in two separate experiments. In order to get better reproducible results, the operation of every step in the assay should be controlled. Furthermore, a preliminary experiment before assay for each batch is recommended.</li> <li>Each kit has been strictly passed Q.C test. However, results from end users might be inconsistent with our in-house data due to some unexpected transportation conditions or different lab equipments. Intra-assay variance among kits from different batches might arise from above factors, too.</li> <li>Kits from different manufacturers for the same item might produce different results, since we have not compared our products with other manufacturers.</li> </ul>
Comment:	Information on standard material:
	The standard might be recombinant protein or natural protein, that will depend on the specific
	kit. Moreover, the expression system is E.coli or yeast or mammal cell. There is 0.05% proclin
	300 in the standard as preservative.
	Information on reagents:
	The stop solution used in the kit is sulfuric acid with concentration of 1 mol/L. And the wash
	solution is TBS. The standard diluent contains 0.02 % sodium azide, assay diluent A and assay
	diluent B contain 0.01% sodium azide. Some kits can contain is BSA in them.
	Information on antibodies:
	The provided antibodies and their host vary in different kits.
Sample Volume:	100 µL
Assay Time:	3 h
Plate:	Pre-coated
Protocol:	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate
	provided in this kit has been pre-coated with an antibody specific to Vitamin D Binding Protein
	(DBP). Standards or samples are then added to the appropriate microtiter plate wells with a
	biotin-conjugated antibody specific to Vitamin D Binding Protein (DBP). Next, Avidin conjugated
	to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB

concentration of Vitamin D Binding Protein (DBP) in the samples is then determined by
change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The
enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the colo
biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The

## Application Details

	<ul> <li>For ELISA kit, 1 day storage at 37°C can be considered as 2 months at 4°C, which means 3 days at 37°C equaling 6 months at 4°C.</li> </ul>
	within the expiration date of the kit.
	pouch containing the desiccant pack, and reseal along entire edge of zip-seal. Note: It is highly recommended to use the remaining reagents within 1 month provided this is
	according to the above storage condition. Besides, please return the unused wells to the foil
	For opened kit: When the kit is opened, the remaining reagents still need to be stored
	stored at -20°C upon receipt while the others should be at 4°C.
Storage Comment:	<ul> <li>For unopened kit: All the reagents should be kept according to the labels on vials. The Standard, Detection Reagent A, Detection Reagent B and the 96-well strip plate should be</li> </ul>
Storage:	4 °C
	beginning to the end.
	is also strongly suggested that the whole assay is performed by the same operator from the
	especially room temperature, air humidity, incubator temperature should be strictly controlled.
	To minimize extra influence on the performance, operation procedures and lab conditions,
5	5 % within the expiration date under appropriate storage condition.
Handling Advice:	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than
	clothing protection when using this material.
Precaution of Use:	The Stop Solution suggested for use with this kit is an acid solution. Wear eye, hand, face, and
Handling	
Restrictions:	For Research Use only
	Inter-Assay: CV<12%
	Intra-Assay: CV<10%
	CV(%) = SD/meanX100
	Vitamin D Binding Protein (DBP) were tested on 3 different plates, 8 replicates in each plate.
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level
