

## Datasheet for ABIN458133 Rabbit anti-Human IgA (Fc Region) Antibody (TRITC)

Overview	
Quantity:	1 mL
Target:	IgA
Binding Specificity:	Fc Region
Reactivity:	Human
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	TRITC
Application:	ELISA, Immunofluorescence (IF), Immunocytochemistry (ICC), Immunohistochemistry (Frozen Sections) (IHC (fro))
Product Details	
Immunogen:	Purified polyclonal IgA isolated from pooled human serum. Freund's complete adjuvant is used in the first step of the immunization procedure.
Specificity:	Tetramethylrhodamine isothiocyanate-conjugated IgG fraction of polyclonal Rabbit antiSerum to Human IgA, Fc specific.
Cross-Reactivity (Details):	Inter-species cross-reactivity is a normal feature of antibodies to immunoglobulins, since Ig of different species frequently share antigenic determinants. Cross-reactivity of this immunoconjugate has not been tested on detail.
Characteristics:	The reactivity of the antiserum is directed to the Fc subunit of the IgA molecule which expresses strict isotypic (class) specificity. It does not react with any non-Ig protein in human serum, as tested by immunoelectrophoresis and double radial immunodiffusion. Direct

## Product Details

	immunofluorescence staining of cytoplasmic Ig of appropriately treated cell and tissue substrates, to demonstrate immunoglobulins or specific antibodies in cells and tissues, to identify circulating antibodies in serodiagnostic microbiology and autoimmune diseases.
	Antisera to IgA do not discriminate between serum IgA (monomeric and dimeric) and higher
	molecular forms such as secretory IgA. This immunoconjugate is not pre-diluted. The optimum
	working dilution of each conjugate should be established by titration before being used. Excess
	labelled antibody must be avoided because it may cause high unspecific background staining
	and interfere with the specific signal.
Purification:	Purified
Target Details	
Target:	IgA
Abstract:	IgA Products
Target Type:	Antibody
Application Details	
Application Notes:	ELISA,Immunocytochemistry,Immunohistochemistry (frozen),(In)direct immunofluorescence.
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Reconstitution:	It is reconstituted by adding 1 mL sterile distilled water, spun down to remove insoluble
	particles, divided into small aliquots, frozen and stored at or below -20 °C.TRITC-coupled
	purified hyperimmune rabbit IgG lyophilized from a solution in phosphate buffered saline
	(PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity. It is
	reconstituted by adding 1 mL sterile distilled water, spun down to remove insoluble particles,
	divided into small aliquots, frozen and stored at or below -20 °C.
Buffer:	TRITC-coupled purified hyperimmune rabbit IgG lyophilized from a solution in phosphate
	buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody
	activity.
	dotrity.
Preservative:	Without preservative

All rights reserved. Storage Comment:

The lyophilized conjugate is shipped at ambient temperature and may be stored at +4°C, prolonged storage at or below -20°C. Prior to use, an aliquot is thawed slowly at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the immunoconjugate.
