

Datasheet for ABIN458306 **Rabbit anti-Monkey IgG (Heavy & Light Chain) Antibody (Biotin)**

Overview

000101000	
Quantity:	1 mL
Target:	lgG
Binding Specificity:	Heavy & Light Chain
Reactivity:	Monkey
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	Biotin
Application:	ELISA, Western Blotting (WB), Immunocytochemistry (ICC), Immunohistochemistry (Paraffin- embedded Sections) (IHC (p)), Dot Blot (DB)
Product Details	
Immunogen:	Purified normal IgG isolated from pooled rhesus monkey serum. Freund's complete adjuvant is used in the first step of the immunization procedure.
Specificity:	Biotin-conjugated IgG fraction of polyclonal Rabbit antiSerum to Monkey IgG, heavy and light chains
Cross-Reactivity (Details):	Inter-species cross-reactivity is a normal feature of antibodies to immunoglobulins, since Ig of different species frequently share antigenic determinants. Precipitation reactions have been observed with IgG in Serum of other old-world Monkeys, including Cercopithecus, Cynomolgus and Baboon. The conjugate may also react with IgG of other species as has been observed for
	Chimpanzee and man.

includes a certain degree of reactivity with other immunoglobulins via the common Fab portion.
It does not react with any non-Ig protein in monkey serum, as tested by immunoelectrophoresis
and double radial immunodiffusion. In immunocytochemical and immunohistochemical
staining to identify and measure IgG, antigen or antibody, at the cellular and subcellular level by
staining of appropriately treated cell and tissue substrates, and to demonstrate circulating
antibodies in serodiagnostic microbiology and autoimmune diseases, to identify a specific
antigen or immune complex using a reference antibody of monkey origin in the middle layer of
the indirect test procedure. As a second step an avidin or streptavidin conjugate of the user's
choice has to be used. This immunoconjugate is not pre-diluted. The optimum working dilution
of each conjugate should be established by titration before being used. Excess labelled
antibody must be avoided because it may cause high unspecific background staining and
interfere with the specific signal.

Purification:

Purified

Target Details

Target:	IgG
Abstract:	IgG Products
Target Type:	Antibody
Application Details	
Application Notes:	ELISA,Immunocytochemistry,Immunohistochemistry (paraffin),Dot blot,Immunoblotting.
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Reconstitution:	It is reconstituted by adding 1 mL sterile distilled water, spun down to remove insoluble particles, divided into small aliquots, frozen and stored at or below -20 °C.Biotin-coupled
	purified hyperimmune rabbit IgG lyophilized from a solution in phosphate buffered saline
	(PBS, pH 7.2). No preservative added It is reconstituted by adding 1 mL sterile distilled water,
	spun down to remove insoluble particles, divided into small aliquots, frozen and stored at or below -20 °C.
Buffer:	Biotin-coupled purified hyperimmune rabbit IgG lyophilized from a solution in phosphate

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/3 | Product datasheet for ABIN458306 | 07/26/2024 | Copyright antibodies-online. 	buffered saline (PBS, pH 7.2). No preservative added
Preservative:	Without preservative
Storage:	RT,4 °C,-20 °C
Storage Comment:	The lyophilized conjugate is shipped at ambient temperature and may be stored at +4°C, prolonged storage at or below -20°C. Prior to use, an aliquot is thawed slowly at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a
	slight precipitation occurs upon storage, this should be removed by centrifugation. It will not
	affect the performance of the immunoconjugate.
